This volume represents a collection of topics presented at the Tenth Annual Symposium of the Barrow Neurological Institute. No attempt is made to be comprehensive but rather an attempt is made to give adequate attention to the major important topics in this field. Neurodevelopmental biology, pathophysiology, and laboratory evaluation are discussed. Subjects include hypoxic ischemia, intraventricular hemorrhage, fetal neurosurgery, surgery of hydrocephalus,

problems of apnea, ultrasound and CT imaging techniques, electrodiagnosis and ethical and economic issues. This volume will be of interest to neurologists and neurosurgeons in general, and especially to pediatric neurologists and neurosurgeons, and perinatologists.

Maoz views the evolution of international relations over the last two centuries as a set of interacting, cooperative and conflicting networks of states. The

networks that emerged are the result of national choice processes about forming or breaking ties with other states. States are constantly concerned with their security and survival in an anarchic world. Their security concerns stem from their external environment and their past conflicts. Because many of them cannot ensure their security by their own power, they need allies to balance against a hostile international environment. The alliance choices made by states define the structure of security cooperation networks and spill over into other cooperative networks, including trade and institutions. Maoz tests his theory by applying social networks analysis (SNA) methods to international relations. He offers a novel perspective as a system of interrelated networks that co-evolve and interact with one another.

Catalysis is a multidisciplinary activity which is reflected in this book. The editors have chosen a novel combination of basic disciplines - homogeneous catalysis by metal complexes is treated jointly with heterogeneous catalysis with metallic and non-metallic solids. The main theme of the book is the molecular approach to industrial catalysis. In the introductory section Chapter 1 presents a brief survey of the history of industrial heterogeneous and homogeneous catalysis. Subsequently, a selection of current industrial catalytic processes is described (Chapter 2). A broad spectrum of important catalytic applications is presented, including the basic chemistry, some engineering aspects, feedstock sources and product utilisation. In Chapter 3, kinetic principles are treated. The section on fundamental catalysis begins with a description of the bonding in complexes and to surfaces (Chapter 4). The elementary steps on complexes and surfaces are described. The chapter on heterogeneous catalysis (5) deals with the mechanistic aspects of three groups of important reactions: syn-gas conversion, hydrogenation, and oxidation. The main principles of metal and metal oxide

catalysis are presented. Likewise, the chapter on homogeneous catalysis (6) concentrates on three reactions representing examples from three areas: carbonylation, polymerization, and asymmetric catalysis. Identification by in situ techniques has been included. Many constraints to the industrial use of a catalyst have a macroscopic origin. In applied catalysis it is shown how catalytic reaction engineering deals with such macroscopic considerations in heterogeneous as well as homogeneous catalysis (Chapter 7). The transport and kinetic phenomena in both model reactors and industrial reactors are outlined. The section on catalyst preparation (Chapters 8 and 9) is concerned with the preparation of catalyst supports, zeolites, and supported catalysts, with an emphasis on general principles and mechanistic aspects. For the supported catalysts the relation between the preparative method and the surface chemistry of the support is highlighted. The molecular approach is maintained throughout. The first chapter (10) in the section on catalyst characterization summarizes the most common spectroscopic techniques used for the characterisation of heterogeneous catalysts such as XPS, Auger, EXAFS, etc. Temperature programmed techniques, which have found widespread application in heterogeneous catalysis both in catalyst characterization and simulation of pretreatment procedures, are discussed in Chapter 11. A discussion of texture measurement, theory and application, concludes this section (12). The final chapter (13) gives an outline of current trends in catalysis. Two points of view are adopted: the first one focusses on developments in process engineering. Most often these have their origin in demands by society for better processes. The second point of view draws attention to the autonomous developments in catalysis, which is becoming one of the frontier sciences of physics and chemistry. In this book emphasis is on those reactions catalyzed by heterogeneous and homogeneous catalysts of industrial relevance. The integrative treatment of the subject matter involves many disciplines, consequently, the writing of the book has been a multi-author task. The editors have carefully planned and harmonized the contents of the chapters.

This work considers how Frenchwomen participated in Christian religious practice during the sixteenth century, with their words and their actions. Using extensive original and archival sources, it provides a comprehensive study of how women

contributed to institutional, theological, devotional and political religious matters. Challenging the view of religious reforms and ideas imposed by male authorities upon women, this study argues instead that women, Catholic and Calvinist, lay and monastic, were deeply involved in the culture, meanings and development of contemporary religious practices.

Pentecostals are often portrayed as emotional people who are driven largely by experience. In *Christ-Centered*, Menzies argues that this caricature misses the fact that Pentecostals are fundamentally "people of the book." Although Pentecostals encourage spiritual experience, they do so with a constant eye to Scripture. The Bible, and particularly the book of Acts, fosters and shapes pentecostal experience. Additionally, Pentecostals are defined by their emphasis on a personal relationship with Jesus Christ. At its heart, the pentecostal movement is not Spirit-centered, but rather Christ-centered. The work of the Spirit, as Pentecostals understand it, centers on exalting and bearing witness to the Lordship of Christ. Menzies develops these themes by examining the origins, biblical foundations, and missional orientation of the modern pentecostal movement. He concludes that, in spite of contradictory messages from some in fundamentalist pews and the pentecostal academy, Pentecostals are and have always been solidly evangelical.

In this book, the authors derive the theory of elastic depolarizing collisions and describe their importance in some nonlinear electromagnetic phenomena in gaseous media. The formation of photon echo and a description of its various types in gaseous media are then presented. The authors show that the characteristics of the corresponding signals depend essentially on elastic depolarizing collisions. They also consider the advantages of a new kind of photon echo spectroscopy: polarization photon echo-spectroscopy. A high-level, specialized treatment, *Depolarizing Collisions in Nonlinear Electrodynamics* will appeal to researchers and advanced graduates in nonlinear optics and quantum electronics.

*Retire Secure!* tackles the number one fear facing most IRA and retirement plan owners: running out of money too soon. Lange, a nationally recognized IRA expert, offers specific and practical strategies to successfully navigate the three stages of retirement planning: accumulation, distribution, and estate planning. *Retire Secure!* explains the tax advantages and long term wealth building strategies of selectively and strategically putting money into IRAs, Roth IRAs, 401(k)s, Roth 401(k)s and the myriad other retirement plan options available to individuals working in the corporate world, the non-profit sector, as well as individual proprietors. The book proves that putting money into tax advantaged retirement plans beats "traditional saving" in the after-tax environment. The book sheds new light on best practices for spending your IRA and retirement plan dollars and your traditional savings. Many readers will be surprised to discover that the order in which assets are spent is not a trivial consideration—it can make or break the bank. It also outlines Lange's exceptional estate plan—a plan that has been featured in the *Wall Street Journal* and many other fine financial journals. The book offers financial planning strategies and tactics in plain English that everyone can understand—and using humor and interesting characters in real life situations the book escapes the dreaded dry financial tome tone. For example, Chapter 1 offers a great mini case study that charts the financial destiny of Mr. Pay Taxes Later and Mr. Pay Taxes Now. Both start saving when they are age 30, but when Mr. Pay Taxes Now reaches age 90, he is broke, while Mr. Pay Taxes Later has \$1,946,949 left. Chapter 8 is devoted to a complete case study of "Eddie's and Emily's" entire retirement decision making process. The book is endorsed by more than 31 leading financial experts including Charles Schwab, and Roger G. Ibbotson, Yale Professor and perhaps the world's foremost authority on asset allocation. As a bonus, readers who purchase this book can receive a free information-packed CD. "Retire Secure! is your playbook for winning the retirement game and beyond. It shows you how to capitalize on little known provisions of the tax law that will make your retirement savings last several lifetimes, leveraging your hard earned money into a family legacy. Best of all, you can rely on the advice here since it is written by one of the nation's leading retirement tax planning authorities." Ed Slott, Author *Parlay Your IRA into a Family Fortune* and *The Retirement Savings Time*

Bomb...and How to Defuse It James Lange (Pittsburgh, PA) , an attorney and CPA, is a nationally known IRA, 401(k), and retirement plan distribution expert with over 27 years of experience. His recommendations have appeared 23 times in the Wall Street Journal as well as the New York Times, Newsweek, Kiplinger's, and many other prestigious financial publications.

*Applied Multivariate Analysis* Elsevier Automatic offers an innovative new way to think about how Americans can save for retirement. Over the past quarter century, America's pension system has shifted away from defined benefit plans and toward defined contribution savings programs such as 401(k)s and IRAs. There is much to be done to improve the defined contribution system. Many workers fail to participate and those who do often contribute too little, invest the funds poorly, and are not adequately prepared to manage funds while in retirement. To resolve these problems, the authors propose that employees should be automatically enrolled into a 401(k) plan when they are hired, with the right to opt out, change the amount that they contribute, or change investment choices if they choose. If the employer does not sponsor a 401(k) or similar retirement plan, they would be enrolled in a payroll deduction Automatic IRA. This vision of a transformed defined contribution system incorporates key positive features of defined benefit plans to improve retirement security. Employees contributions would increase over time, their investments would benefit from professional management and rebalancing, and they would receive lifetime income upon retirement. These automatic features will make the 401(k) and similar plans a more effective tool for retirement saving, and they can be extended to the many workers who do not currently have access to an employer plan. In Automatic, the authors present proposals to implement automatic features in all phases of the 401(k) and in IRAs for workers with no employer plan. They also draw from the experience of countries that have implemented automatic saving structures.

Research involving the chemical physics of the inert or rare gases continues unabated. This small volume is meant to deal with advances that have occurred in three selected areas over the past decade. It forms a natural outgrowth of earlier reviews and volumes that have dealt almost exclusively with pure rare-gas solids. Originally, a single chapter was envisaged to cover the topic of alloys and impurities in solid rare gases. However, over the past ten years this single chapter spawned many offshoots and eventually the project became too large for a single volume. Thus the present book contains only a small subset of possible topics involving rare-gas solids intentionally doped with impurities. Chapter 1 gives a brief overview of current research devoted to the rare gases. This is followed by a comprehensive, self-contained chapter dealing with the most recent developments in the area of interatomic interactions. Chapter 3 is concerned with the lattice dynamics of rare-gas solids doped with an impurity which is either another rare-gas or a small molecule. The final chapter deals with the spectroscopy of vibrating and rotating diatomic impurities in rare-gas solids. The birth of this volume was not without its labour pains. I should like to take this opportunity to thank the various people who have at one time or another been involved throughout its gestation period. Clearly, many important topics are omitted from this volume.

Alice in Wonderland (also known as Alice's Adventures in Wonderland), from 1865, is the peculiar and imaginative tale of a girl who falls down a rabbit-hole into a bizarre world of eccentric and unusual creatures. Lewis Carroll's prominent example of the genre of "literary nonsense" has endured in popularity with its clever way of playing

with logic and a narrative structure that has influenced generations of fiction writing.

*Surrealism and Photography in Czechoslovakia: On the Needles of Days* sheds much-needed light on the location of the greatest concentration of Surrealist photography and examines the culture and tradition within which it has taken root and flourished. The volume explores a rich and important artistic output, very little of which has been seen outside of its land of origin. Based on extensive research at museums in Prague and Brno and many conversations with participants in and historians of the movement, Krzysztof Fijalkowski, Michael Richardson and Ian Walker analyse how this photographic work has developed cohesively and rigorously, from the beginnings of Czech Surrealism in 1934, to the intriguing researches of the present-day Czech and Slovak Surrealist group by way of mysterious veiled responses to the repressive contexts with which they were faced from the 1950s to the 1980s. The main chapters, ordered chronologically, are intersected with shorter texts examining specific works. The reader will find in this volume images that present challenges to our understanding of how photographic work has been used within surrealism, pinpointing individual pictures whose dynamic charge may induce instants of compelling interrogation and disruption.

The text Modern Electrochemistry (authored by J. O'M. Bockris and A. K. N. Reddy and published by Plenum Press in 1970) was written between 1967 and 1969. The concept for it arose in 1962 in the Energy Conversion Center at the University of Pennsylvania, and it was intended to act as a base for interdisciplinary students and mature scientists~hemists, physicists, biologists, metallurgists, and engineers-who wanted

to know about electrochemical energy conversion and storage. In writing the book, the stress, therefore, was placed above all on lucidity in teaching physical electrochemistry from the beginning. Although this fundamentally undergraduate text continues to find purchasers 20 years after its birth, it has long been clear that a modernized edition should be written, and the plans to do so were the origin of the present book. However, if a new Bockris and Reddy was to be prepared and include the advances of the last 20 years, with the same degree of lucidity as characterized the first one, the depth of the development would have to be well short of that needed by professional electrochemists.
