*The Arithmetic of Whole, Rational, Irrational and Complex Numbers*  
Addison-Wesley Longman  
Julie Miller wrote her developmental math series because students were coming into her Precalculus course underprepared. They weren't mathematically mature enough to understand the concepts of math nor were they fully engaged with the material. She began her developmental mathematics offerings with intermediate algebra to help bridge that gap. The Precalculus series is a carefully constructed end to that bridge that uses the highly effective pedagogical features from her fastest growing developmental math series. What sets Julie Miller's series apart is that it addresses course issues through an author-created digital

package that maintains a consistent voice and notation throughout the program. This consistency--in videos, PowerPoints, Lecture Notes, and Group Activities--coupled with the power of ALEKS and Connect Hosted by ALEKS, ensures that students master the skills necessary to be successful in Precalculus and can carry them through to the calculus sequence.

*Ti-nspire Tutorials: How to Dominate Math With the Ti-nspire Graphing Calculator* Macmillan Higher Education  
"Mathematics in Our World" is designed

for mathematics survey courses for non-science majors. The text covers a variety of topics designed to foster interest in and show the applicability of mathematics. The book is written by our successful statistics author, Allan Bluman. His easy-going writing style and step-by-step approach make this text very readable and accessible to lower-level students. **College Algebra** Cengage Learning  
Following up his popular "Introduction to the TI-Nspire," teacher and author Lucas Allen continues his TI-Nspire (TM) Tutorials series with a look at the TI-Nspire CAS. The CAS, or computer

algebra system, version of the TI-Nspire is popular at the high school and college level alike for its ability to manipulate not just numbers, but variables. For all the amazing growth that the TI-Nspire platform has shown over the last few years, there still remains a lack of quality resources available for the CAS version of the TI-Nspire. This book is designed to address the needs of students and teachers in search of help with their TI-Nspire CAS. In this second volume of the series, careful attention is given to the CAS specific features of the TI-Nspire CAS. Basic features such as expanding, factoring, and solving simple equations are covered as well as more advanced techniques such as solving complex equations, derivatives, integrals, and differential equations. Any

student or teacher working with mathematics from algebra through calculus can benefit from the techniques taught in this book. Everything in the book is up to date with the latest version of the TI-Nspire CAS operating system, version 3.2. If you don't have the latest version of the OS on your TI-Nspire CAS, the book has all of the information you'll need on how to update your calculator for free. Although the button sequences in the tutorials are designed with the TI-Nspire CX CAS and TI-Nspire CAS Touchpad in mind, even the original TI-Nspire Clickpad is capable of everything covered in the book by making slight modifications to the button sequences. Lucas Allen has become an authority on the use of the TI-Nspire CAS since its release, as he was an early

adopter of the device for use with the math team he coaches in a public school in downstate Illinois. This past spring, his team captured the 2012 Illinois math team state championship, beating out many of Chicago's elite private schools. In this book, you will learn many of the exact same strategies his team uses on the TI-Nspire CAS. For over 10 years, Allen has taught mathematics at the high school level with students of every imaginable achievement level. He has worked with the TI-Nspire for almost half of that time. He blogs about graphing calculators and other math education technologies at Tech Powered Math. *Preliminary Edition* John Wiley & Sons Introduction to Statistics for the Life and Biomedical Sciences has been written to be used in conjunction with a set of self-

paced learning labs. These labs guide students through learning how to apply statistical ideas and concepts discussed in the text with the R computing language. The text discusses the important ideas used to support an interpretation (such as the notion of a confidence interval), rather than the process of generating such material from data (such as computing a confidence interval for a particular subset of individuals in a study). This allows students whose main focus is understanding statistical concepts to not be distracted by the details of a particular software package. In our experience, however, we have found that many students enter a research setting after only a single course in statistics. These students benefit from a

practical introduction to data analysis that incorporates the use of a statistical computing language. In a classroom setting, we have found it beneficial for students to start working through the labs after having been exposed to the corresponding material in the text, either from self-reading or through an instructor presenting the main ideas. The labs are organized by chapter, and each lab corresponds to a particular section or set of sections in the text. There are traditional exercises at the end of each chapter that do not require the use of computing. In the current posting, Chapters 1 - 5 have end-of-chapter exercises. More complicated methods, such as multiple regression, do not lend themselves to hand calculation and computing is necessary for gaining

practical experience with these methods. The lab exercises for these later chapters become an increasingly important part of mastering the material. An essential component of the learning labs are the "Lab Notes" accompanying each chapter. The lab notes are a detailed reference guide to the R functions that appear in the labs, written to be accessible to a first-time user of a computing language. They provide more explanation than available in the R help documentation, with examples specific to what is demonstrated in the labs.
