**World Population Prospects 2019: Highlights** New Africa Press

Made up of the old counties of Wigtownshire and The Stewartry, Galloway covers a vast swathe of Scotland's quiet southwest corner. This under-discovered area offers 260km of coast, full of sandy beaches and towering cliffs, lonely heather-clad moors and quiet hills. Add to this plenty of wildlife, a rich artistic heritage, strong spiritual influences and a climate kissed by the warming Gulf Stream, and you have a region beckoning to be visited.

The United Nations population estimates and projections form a comprehensive set of demographic data to assess population trends at the global, regional and national levels. They are used in the calculation of many of the key development indicators commonly used by the United Nations system, including for more than one third of the indicators used to monitor progress towards the achievement of the Sustainable Development Goals. The 2019 revision of the World Population Prospects is the twenty-sixth edition of the official United Nations population estimates and projections, which have been prepared since 1951 by the Population Division of the Department of Economic and Social Affairs. The 2019 revision presents population estimates from 1950 until the present for 235 countries or areas, which have

been developed through country-specific analyses of historical demographic trends. It builds on previous revisions by incorporating additional results from the 2010 and 2020 rounds of national population censuses as well as information from vital registration and recent nationally representative household sample surveys. The 2019 revision also presents population projections to the year 2100 that reflect a range of plausible outcomes at the global, regional and country levels. These Highlights summarise key population trends described by the estimates and projections presented in World Population Prospects 2019.

Mungo Park was the original lone explorer of West Africa. The first European to reach the Niger, record its flow direction and return alive, he was considered a hero on his return. He died during his second exploration attempt inland along the Niger to discover the city of Timbuktu. Published posthumously in 1815 by the African Institution, which had sponsored his journey, a biography, personal letters and the account of the rescue team sent to discover his fate accompany Park's own journal of the expedition. The journals and letters are a fascinating description of the

constant dangers and thrill of the age of exploration. Battling adverse weather, local hostility, tropical diseases and the death of nearly all his party including his brother-in-law, Park writes 'I would still persevere; and if I could not succeed in the object of my journey, I would at least die on the Niger.'

Starch hydrolysis products are arguably the most versatile of all food sugar ingredients because they can be designed to meet many different nutritional and technological requirements. This book covers all aspects of starch production, from its hydrolysis to the analysis of the finished product. In addition, the most important derivatives of starch hydrolysis products are described and their applications in the food and, increasingly pharmaceutical industries are detailed. This book is essential reading for industrial food scientists and technologists, particularly those in processing and will be of interest to those involved in the formulation of pharmaceutical products. It is also a valuable reference source for food scientists and nutritionists in academic research institutes.

Firsthand accounts from the attorneys and advocates who brought the historic cases and fought to secure the freedom to marry for same-sex couples. The June 2015 decision in *Obergefell v. Hodges* was a sweeping victory for the freedom to marry, but it was one step in a long process. *Love Unites Us* is the history of activists' passion and persistence in the struggle for marriage rights for same-sex couples in the United States, told in the words of those who waged the battle. Launching the fight for the freedom to marry had neither an obvious nor an uncontested

strategy. To many activists, achieving marriage equality seemed far-fetched, but the skeptics were proved wrong in the end. Proactive arguments in favor of love, family, and commitment were more effective than arguments that focused on rights and the goal of equality at work. Telling the stories of people who loved and cared for one another, in sickness and in health, cut through the antigay noise and moved people—not without backlash and not overnight, but faster than most activists and observers had ever imagined. With compelling stories from leading attorneys and activists including Evan Wolfson, Mary L. Bonauto, Jon W. Davidson, and Paul M. Smith, *Love Unites Us* explains how gay and lesbian couples achieved the right to marry. “An exceptional piece of work by courageous and innovative leaders.” —Eric H. Holder Jr., 82nd US attorney general “Captures the amazing story of the fight for marriage equality—in California and around the country. A remarkable journey recounted with truth and eloquence.” —Gavin Newsom, governor of California

Forests and Forest Plants is a component of Encyclopedia of Food and Agricultural Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Forests are an essential part of Earth's life support systems. Forest resources are essential for humankind. They provide both vital goods and services. They provide food, fuel, shelter, soil and water protection, and filter the air we breathe. This publication on Forest and Forest Plants provides the user with such information as to create an awareness of the value of our forestlands and the

products and environmental services they provide. The three volumes on Forests and Forest Plants are organized starting with first the necessity of : the World's Forest Resources – including classification and distribution of forest, urban forestry and agroforestry; Important Tree Species including trees in reclamation and arid zone forestry; Forests and Forest Products including wood and non wood products; the Role of Forests in the Biosphere – preserving biological diversity, functions in the hydrological cycle, etc.; and Conservation and Breeding of Forest Trees – what is being done to improve our forest resources - silviculture, tree nurseries, and forest protection. The theme Forest and Forest Plants has led to the conclusion that there are substantial difficulties in matching environmental concerns and sustainability with an ever-increasing world population. Thus there is a tension between maximizing for food, wood and production on the one hand and implementing sustainable development and environmental protection on the other. These three volumes are aimed at the following five major target audiences: University and College Students Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers, NGOs and GOs. This volume of the 2019 Revision presents the demographic profiles of the official United Nations population estimates and projections. The demographic profiles display key demographic indicators for selected periods or dates between 1950-2100, for the world, development groups, regions, subregions (50 aggregates) and 201 countries or areas with more than 90,000 inhabitants in 2019. In all tables and figures, values for 1950-2020 are estimates and those thereafter are projections (medium variant, and lower and upper 95 per cent prediction intervals for figures). For each country or area, the volume also provides a brief description of the data sources and demographic methods that were used to derive the base-year estimates of population and components of demographic change (fertility, child, adult and overall mortality, international migration).

Bioactive Carbohydrate Polymers is probably the first book dealing with the latest in the field of polysaccharides and related products and their biological activities, especially the immunological effects. The different chapters describe the structure and bioactivity of polysaccharides from plants used in traditional medicine in different parts of the world, especially China, Japan and Europe. The focus of the book is on immunologically active plant and seaweed polysaccharides, pharmacological activities of sulphated polysaccharides of animal and seaweed origin, and on possible activities of polysaccharides in our food. Methods for isolation and characterisation of the polymers with chemical and enzymatic methods is covered, as

well as discussions on the different biological test-systems and the information they provide. This book will be useful to scientists and postgraduate students working with polysaccharides and their possible uses, and should be of interest for people working in the areas of chemistry, biology, pharmacy and medicine.

The Almanac of Women and Minorities in World Politics is a reference book that provides political and biographical details on the achievements of women and minorities in the executive, legislative, and judicial branches of every nation (and most dependent territories) in the world. The "Executive" section on a particular country might include information on that country's first woman president, or its first minority prime minister, for example. It also includes information on the first female cabinet member, and first female ambassador. Likewise, the "Legislative" section provides details on the first women and minority members of the national parliament. And, the "Judicial" section might give data on the country's first women and minority judges. The book also features a number of shorter, politically-oriented biographical sketches that chronicle all the women--and certain minority individuals--who have influenced the political environment of their nation, either locally or internationally, both adversely and constructively, since 1900.

The World and a Very Small Place in Africa is a fascinating look at how contacts with the wider world have affected how people have lived in Niimi, a small and little-known region at the mouth of West Africa's Gambia River, for over a thousand years. Drawing on archives, oral traditions and published works, Donald R. Wright connects world history with real people on a local level through an exploration of how global events have affected life in Niimi. Thoroughly revised and updated throughout, this new edition rests on recent thinking in globalization theory, reflects the latest historiography and has been extended to the present day through discussion of the final years of Gambian President

Yahya Jammeh's regime, the role of global forces in the events of the 2016 presidential elections and the changes that resulted from these elections. The book is supported throughout by photographs, maps and Perspectives boxes that present detailed information on such topics as Alex Haley's *Roots* (part set in Niimi), why Gambians take the risky "back way" to reach Europe, or "Wiri-Wiri," the Senegalese soap that has Gambians' attention. Written in a clear and personal style and taking a critical yet sensitive approach, it remains an essential resource for students and scholars of African history, particularly those interested in the impact of globalization on the lives of real people.
