Advancing Nursing Practice in Cancer and Palliative Care Routledge

This is a comprehensive guide to the theory and practice of nursing addressing the nursing theory and skills specific to clients' and patients' needs. Each chapter has learning outcomes, study activities and reflection to prompt readers to learn as they read.

**Fundamentals of Nursing Models, Theories and Practice, with Wiley E-Text** Taylor & Francis

This book helps new nursing students, and

those applying to nursing programmes, understand what being a nurse is all about. It explores the essential issues, processes and theories of nursing practice, and is therefore an ideal introductory text as you start your nursing programme, or as pre-course reading. This revised edition includes a new first chapter on being a nursing student, with insights from students themselves, and explains what will be expected of you in the new all-degree programmes. Interviews with real nurses in each of the fields of practice gives you an important view into the real world of nursing. The revised third edition includes a new chapter on being a nursing student, with student tips and stories Updated with, and linked to, the new NMC

Standards and Essential Skills Clusters for degree-level education Activities, case studies and scenarios helps you apply theory to practice Particularly suitable for first-year students and those applying to pre-registration programmes This book is part of the Transforming Nursing Practice Series , the first series of books designed to help students meet the requirements of the NMC Standards and Essential Skills Clusters for the new degree programmes. For more information on Nursing titles and promotions, please visit <http://www.uk.sagepub.com/nursing.sp> Narratives, Health, and Healing Routledge Today, there are generally universities in Africa rather than 'African universities'. The legitimacy of the university in Africa is

under serious questions now because of its complicity in racism, patriarchy, sexism, colonialism, capitalism, genocide, epistemicide, linguicide, culturecide, and alienation. In other words, the university in Africa as we know it today is elitist and exclusionary. Therefore, rethinking the idea of the university is fundamental to overcoming its current deficiencies in the Global South. This volume, bringing together a number of national case studies and macro-analyses on the dynamics of changing higher education in the Global South, gestures towards the desired, imagined decolonial African university, which should be a site of multilingualism where African indigenous languages, cosmologies and ontologies become a central part of its identity and soul, intolerant of epistemicides, linguicides, and cultural imperialism, but a site of cognitive and social justice that fully embraces the idea that all human beings are born into valid, useful, relevant and legitimate knowledge systems.

Pragmatic Children's Nursing Taylor & Francis  
 Nursing Theory, Postmodernism, Post-structuralism and Foucault critiques

mainstream American nursing theory and its use of post-structural theory, comparing and contrasting how postmodern and post-structural ideas have been used fruitfully in nursing research and theorizing elsewhere. In the late 1980s, references to post-structuralism and Michel Foucault started to appear in nursing journals. Since then, hundreds of nursing publications have cited postmodernism and key post-structural ideas such as power/knowledge, discourse, and de-centering the human subject. In *Nursing Theory, Postmodernism, Post-structuralism and Foucault* Olga Petrovskaya argues that the application of these ideas is markedly different in American nursing theory scholarship compared to nursing theoretical scholarship generated outside the canon of "unique" nursing theory. Analyzing relevant literature from the late 1980s through 2010s, she demonstrates this difference, arguing that American nursing theory calcified into a matrix of dogmas built on logical positivism, wary of "borrowed" theory, and loyal to a "unique nursing science." Post-structural ideas that fit the matrix such as criticism of medicine

are sanctioned, whereas ideas skeptical of humanistic agendas including those that challenge American nursing theory are rendered meaningless. In contrast, other nurse scholars, from Britain, Australia, Canada, and what the author calls the American enclave group, engaged with postmodern and post-structural perspectives to enrich their research and invite readers to rethink nursing practice. The book showcases examples of their intelligent, creative theorizing. Arguing that American nursing theory enervated nursing theorizing, Petrovskaya calls for opening this matrix to theoretical and methodological creativity, less rigid categories of scholarship, and healthy self-examination. Making the case that post-structural ideas are vital for nurses' ability to critically reflect on their discipline and profession, this is a necessary read for all those interested in nursing theory, philosophy and praxis.

*Children and Young People's Nursing at a Glance* Routledge  
 This distinctive collection explores the use of narratives in the social construction of wellness and illness. *Narratives, Health, and Healing* emphasizes what the process

of narrating accomplishes--how it serves in the health communication process where people define themselves and present their social and relational identities. Organized into four parts, the chapters included here examine health narratives in interpersonal relationships, organizations, and public fora. The editors provide an extensive introduction to weave together the various threads in the volume, highlight the approach and contribution of each chapter, and bring to the forefront the increasingly important role of narrative in health communication. This volume offers important insights on the role of narrative in communicating about health, and it will be of great interest to scholars and graduate students in health communication, health psychology, and public health. It is also relevant to medical, nursing, and allied health readers.

Pioneering Theories in Nursing Routledge Health promotion is an increasingly high profile aspect of a nurse's role - both in line with health policy and as nursing has shifted from a disease model to a health model. This textbook explores how and why health promotion works in nursing, developing a new framework for

understanding the nurse's role and promoting evidence-based practice. Drawing on empirical research and discussing existing theories of health promotion and of nursing, Stewart Piper identifies three principal approaches: The Nurse as Behaviour Change Agent The Nurse as Strategic Practitioner The Nurse as Empowerment Facilitator The book describes the aims, processes, impact and outcomes of health promotion interventions in nursing for each of these models and identifies criteria for evaluating the associated nursing interventions - enabling clinical judgements about effective practice. Evidence-based examples demonstrate the relationship between health promotion theory and pragmatic applications for nursing throughout. Each chapter includes an introduction, learning outcomes and exercises, making this an essential book for all nursing students studying health promotion.

Visual Research Methods in the Social Sciences: Awakening Visions is an indispensable resource for students, researchers and teachers seeking to use visual sources in their research and understand how images work. This fully updated edition adds questions and activities for studies and many new images and models as well as additional exploration of social and theoretical contexts and examples of current visual and multimodal research. Due to the proliferation of image-centric social media and the growing potential for 'fake news', being able to critically assess media and other visual messages is more important than ever. For researchers embarking on

visual research this book offers useful practical guidance and real-world examples from seasoned researchers exploring cultures as varied as: religious cults in Venezuela, the Beer Can Regatta in Darwin, Mapuche Indians in Chile and graffiti artists in Sheffield. It offers an integrated approach to visual research, building compelling case studies using a wide range of visual forms, including: archive images, media samples, maps, objects, video, photographs and drawings alongside traditional qualitative approaches. Examples of the visual construction of 'place', representations of social identities and different approaches to analysis are explored in the first section of the book, whilst the essays in the second section highlight the creativity and innovation of four leading visual researchers. This new edition will prove valuable for both experienced visual researchers and those embarking on visual research in the social sciences for the first time.

Nursing Theories and Models Routledge  
Item response theory (IRT) has moved beyond the confines of educational measurement into assessment domains

such as personality, psychopathology, and patient-reported outcomes. Classic and emerging IRT methods and applications that are revolutionizing psychological measurement, particularly for health assessments used to demonstrate treatment effectiveness, are reviewed in this new volume. World renowned contributors present the latest research and methodologies about these models along with their applications and related challenges. Examples using real data, some from NIH-PROMIS, show how to apply these models in actual research situations. Chapters review fundamental issues of IRT, modern estimation methods, testing assumptions, evaluating fit, item banking, scoring in multidimensional models, and advanced IRT methods. New multidimensional models are provided along with suggestions for deciding among the family of IRT models available. Each chapter provides an introduction, describes state-of-the art research methods, demonstrates an application, and provides a summary. The book addresses the most critical IRT conceptual and statistical issues confronting researchers and advanced students in

psychology, education, and medicine today. Although the chapters highlight health outcomes data the issues addressed are relevant to any content domain. The book addresses: IRT models applied to non-educational data especially patient reported outcomes Differences between cognitive and non-cognitive constructs and the challenges these bring to modeling. The application of multidimensional IRT models designed to capture typical performance data. Cutting-edge methods for deriving a single latent dimension from multidimensional data A new model designed for the measurement of constructs that are defined on one end of a continuum such as substance abuse Scoring individuals under different multidimensional IRT models and item banking for patient-reported health outcomes How to evaluate measurement invariance, diagnose problems with response categories, and assess growth and change. Part 1 reviews fundamental topics such as assumption testing, parameter estimation, and the assessment of model and person fit. New, emerging, and classic IRT models including modeling multidimensional data and the use of new

IRT models in typical performance measurement contexts are examined in Part 2. Part 3 reviews the major applications of IRT models such as scoring, item banking for patient-reported health outcomes, evaluating measurement invariance, linking scales to a common metric, and measuring growth and change. The book concludes with a look at future IRT applications in health outcomes measurement. The book summarizes the latest advances and critiques foundational topics such as multidimensionality, assessment of fit, handling non-normality, as well as applied topics such as differential item functioning and multidimensional linking. Intended for researchers, advanced students, and practitioners in psychology, education, and medicine interested in applying IRT methods, this book also serves as a text in advanced graduate courses on IRT or measurement. Familiarity with factor analysis, latent variables, IRT, and basic measurement theory is assumed.

The Nursing Process John Wiley & Sons  
If you want to introduce Inquiry-Based Learning (IBL) into your curriculum but are not sure how to go about it, this book will

set you on the right track. In this text the author shares the experience of leading a project to implement IBL as a whole integrated pre-registration curriculum and provides a blueprint for successful implementation. The practicalities of implementing IBL can be a daunting prospect. Using a wealth of examples, relevant theories, models and research, this book takes the reader through the logistics of every stage of implementation. It provides the necessary theoretical and research perspectives and describes the detail how to manage the project stage by stage, covering planning, implementation, evaluation and change management. In addition, it looks at the operational practicalities and describes eight subprojects: staff development; communication systems; the classroom compass; practice experience; documentation; electronic library and media resources, as well as reviewing the post implementation situation. Whether you are new to or already familiar with Inquiry-Based Learning or simply need some practical guidelines, this book will provide an indispensable source of reference.

Philosophy of Medicine Routledge  
Nursing theory is a major part of all nursing courses and nurses are encouraged to use theories in practice, but it is not always easy for the student to make a real connection between the two. Drawing on many years' experience of teaching and research, Hugh McKenna addresses the theory needs of both students and qualified staff. He demystifies the confusing terminology associated with nursing theory and shows how all nurses can build theory from practice through reflection and analysis. This text offers step-by-step guidelines on:

- \* how to analyse concepts
- \* how to generate and select theory
- \* how to apply and test theory in practice.

Written in a friendly, easy to read style, Nursing Theories and Models puts forward realistic strategies for bridging the theory-practice gap.

*The Essential Concepts of Nursing* Jessica Kingsley Publishers  
Understanding the perspective of carers is an essential aspect of nursing. Supporting Families and Carers: A Nursing Perspective offers insights into the fundamental principles of caring for families and carers

irrespective of age, gender, ethnicity, sexuality or religion. This book discusses the concepts and theories that underpin our understanding of the behaviours and feelings that families and caregivers may experience. While the book covers theoretical dimensions to understand the caregiving experience, it also provides practical perspectives for nursing and is a unique resource to inform nursing practice and learning at all levels. The book covers topics such as the stress process, stressors and how they relate to caregiving as well as actions and resources to help alter stressful situations. Interventions discussed include training and education programs, problem-solving skills, information technology-based support and formal approaches to planning care that take into account the specific needs of carers. Carers are a central aspect of contemporary health services, and working with carers is fundamental to the delivery of high-quality person- and family-centred nursing care. This invaluable resource helps nurses to work effectively in partnership with patients and their carers.

For the first time, leading authorities come together to offer their expertise as they present the building blocks and concepts of nursing theory. Provides an explanation of concepts necessary as building block of theory. Research based. Draws extensively on literature. Experienced contributors and editors, all leading experts in their fields. *Caring for People in Pain* John Wiley & Sons

*Pioneering Theories in Nursing* traces the origins of nursing theories through their founders. Unlike other nursing theory texts, this book provides the personal story on some of the greatest nursing leaders, clinicians and theorists to date so the reader can understand the context within which the nursing pioneer developed their theory. It will attempt to explain the theories and practice of nursing and provide food for thought for students and practitioners, encouraging reflective thinking. Each section begins with an overview of the chapters and identifies common themes. Designed to be highly user-friendly, each chapter follows a standard structure with a short biography,

a summary on their special interests and an outline of their writings before each theory is examined in detail. The chapter then looks at instances of how this theory has been put into practice and what influence this process has had on the wider nursing community. Further links to other theorists are provided as well as key dates in the life of the theorists and a brief profile.

What kind of knowledge is medical knowledge? Can medicine be explained scientifically? Is disease a scientific concept, or do explanations of disease depend on values? What is "evidence-based" medicine? Are advances in neuroscience bringing us closer to a scientific understanding of the mind? The nature of medicine raises fundamental questions about explanation, causation, knowledge and ontology - questions that are central to philosophy as well as medicine. This book introduces the fundamental issues in philosophy of medicine for those coming to the subject for the first time, including: • understanding the physician-patient

relationship: the phenomenology of the medical encounter. • Models and theories in biology and medicine: what role do theories play in medicine? Are they similar to scientific theories? • Randomised controlled trials: can scientific experiments be replicated in clinical medicine? What are the philosophical criticisms levelled at RCTs? • The concept of evidence in medical research: what do we mean by "evidence-based medicine"? Should all medicine be based on evidence? • Causation in medicine. • What do advances in neuroscience reveal about the relationship between mind and body? • Defining health and disease: are explanations of disease objective or do they depend on values? • Evolutionary medicine: what is the role of evolutionary biology in understanding medicine? Is it relevant? Extensive use of empirical examples and case studies are included throughout, including debates about smoking and cancer, the use of placebos in randomised controlled trials, controversies about PSA testing and research into the causes of HIV. This is an indispensable introduction to those teaching philosophy of medicine and

philosophy of science.

*Neuropsychological Rehabilitation* John Wiley & Sons

*Advancing Practice in Cancer and Palliative Care* critically explores and analyses the themes and pragmatics of advancing nursing practice in relation to cancer and palliative care. Written by a team of experienced practitioners and educationalists, each chapter considers key elements of advanced practice in terms of conceptual, practical and organisational themes. Case studies are used throughout to encourage the reader to take a reflective stance on the way in which the themes of the text can be applied to practice. The book will be a useful resource for cancer and palliative care nurses wanting to advance and lead practice effectively.

*Vital Notes for Nurses: Principles of Care* is an essential guide for nursing students and newly qualified nurses. It provides a concise introduction to the essential principles of nursing care. It encourages nurses to examine the principles and evidence underlying nursing practice and

equips them with a thorough understanding of the complexities of patient care in different environments of care. *Principles of Care* explores concepts of health and illness, conceptual frameworks for practice, principles of healthcare delivery, and professional standards. Key themes include assessment and planning, implementation and evaluation, patient education and health promotion, decision making and risk management, benchmarking, clinical effectiveness and practice development. \* Examines assessment, planning and evaluation of care \* Covers risk management and prioritisation of care \* Addresses the use of NICE guidance and National service frameworks \* Explores clinical effectiveness, practice development and quality assurance \* Includes learning objectives, scenarios and case studies

Decision-making pervades all aspects of midwifery practice across the world. Midwifery is informed by a number of decision-making theories, but it is sometimes difficult to marry these

theories with practice. This book provides a comprehensive exploration of decision-making for midwives irrespective of where in the world they practice or in which model of care. The first part critically reviews decision-making theories, including the Enhancing Decision-making Assessment in Midwifery (EDAM) tool, and their relevance to midwifery. It explores the links between midwifery governance, including professional regulation and the law, risk and safety and decision-making as well as how critical thinking and reflection are essential elements of decision-making. It then goes on to present a number of diverse case studies, demonstrating how they interrelate to and impact upon optimal midwifery decision-making. Each chapter presents examples that show how the theory translates into practice and includes activities to reinforce learning points. Bringing together a diverse range of contributors, this volume will be essential reading for midwifery students, practising midwives and midwifery academics.

This book offers a broad overview of the

theory and practice of care planning in veterinary nursing, answering three key questions: What are nursing care plans? Why should nursing care plans be used in practice? How should nursing care plans be used in practice? It provides basic definitions and explanations which will be useful to those unfamiliar with nursing care plans. For those veterinary nurses and technicians who are using nursing care plans, the content stimulates debate and discussion, by covering some of the philosophical and theoretical aspects of nursing and drawing comparisons and contrasts between the veterinary and human nursing roles and contexts. There is a pressing need for veterinary nurses to establish themselves as professionals and develop their unique role within the veterinary care team. Nursing care plans are a core tool to support that development. It is hoped that veterinary nurses may borrow tools from the pages of this book or use it as a resource design their unique care plans: either way, this practical guide will support the application of care planning, no matter the species of the animal kingdom for whom you are caring.

Routledge International Handbook of Nurse Education Learning Matters  
Designed to support global development of nursing science, the Routledge International Handbook of Advanced Quantitative Methods in Nursing Research provides a new, comprehensive, and authoritative treatment of advanced quantitative methods for nursing research. Incorporating past approaches that have served as the foundation for the science, this cutting edge book also explores emerging approaches that will shape its future. Divided into six parts, it covers: - the domain of nursing science - measurement—classical test theory, IRT, clinimetrics, behavioral observation, biophysical measurement -models for prediction and explanation—SEM, general growth mixture models, hierarchical models, analysis of dynamic systems - intervention research—theory-based interventions, causality, third variables, pilot studies, quasi-experimental design, joint models for longitudinal data and time to event -e-science—DIKW paradigm, big data, data mining, omics, FMRI -special topics—comparative effectiveness and meta-analysis, patient safety, economics

research in nursing, mixed methods, global research dissemination Written by a distinguished group of international

nursing scientists, scientists from related fields, and methodologists, the Handbook is the ideal reference for everyone

involved in nursing science, whether they are graduate students, academics, editors and reviewers, or clinical investigators.
