Anthropology has two main tasks: to understand what it is to be human and to examine how humanity is manifested differently in the diversity of culture. These tasks have gained new impetus from the extraordinary rise of the digital. This book brings together several key anthropologists working with digital culture to demonstrate just how productive an anthropological approach to the digital has already become. Through a range of case studies from Facebook to Second Life to Google Earth, Digital Anthropology explores how human and digital can be defined in relation to one another, from avatars and disability; cultural differences in how we use social networking sites or practise religion; the practical consequences of the digital for politics, museums, design, space and development to new online world

and gaming communities. The book also explores the moral universe of the digital, from new anxieties to open-source ideals. Digital Anthropology reveals how only the intense scrutiny of ethnography can overturn assumptions about the impact of digital culture and reveal its profound consequences for everyday life. Combining the clarity of a textbook with an engaging style which conveys a passion for these new frontiers of enquiry, this book is essential reading for students and scholars of anthropology, media studies, communication studies, cultural studies and sociology.

**Committee on Small Business** Irwin Professional Publishing Rural Marketing as a separate discipline in management teaching has emerged recently. The growing importance of the subject has been well realized by the marketers, policymakers and management interns. However, there is dearth of quality literature on the subject, comprehensive coverage of all the dimensions, aspects and managerial issues pertaining to rural marketing. In most of the management institutions, a half-baked knowledge of rural marketing is being imparted to the management interns while there is more emphasis on marketing perspective on harnessing the immense potential offered by rural areas through suitable marketing planning, product mix, pricing, distribution, promotional mix, branding and communication strategies. Present book is a serious attempt to bridge the need gap in the subject.

Students preparing to succeed in today's workplace require solid training in communication skills and principles, as well as experience applying them in realistic professional contexts. In *Business and Professional Communication*, Kory Floyd and Peter Cardon incorporate substantial business-world experience throughout the text's principles, examples and activities. They ensure that the theories, concepts, and skills most relevant to the communication discipline are fully represented. The result is a program that helps students understand and apply

communication skills in both their personal and professional lives. The 'People First' feature presents students with realistic scenarios that are sensitive, discomfoting, or tricky to manage. It then teaches students how to navigate those situations effectively. This gives students concrete skills for preserving relationships with others as they encounter these difficult conversations. Unique to the market, this text includes a dedicated chapter focused on perspective-taking: covering the processes of person-perception; common perceptual errors; the self-serving bias and the fundamental attribution error; the self-concept; and the processes of image management. This equips students to understand and pay attention to the perspectives of others. *Business and Professional Communication* also includes a dedicated chapter focused on career communication, encouraging students to engage in networking and to consider the priorities and points of view of others as they seek employment and begin to interact professionally.
