Routledge

This is one of the most significant military books of the twentieth century.

By an outstanding soldier of independent

mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Current Trends in the Development and Teaching of the four Language Skills builds connections from theory in the four language skills to instructional practices. It comprises twenty-one chapters that are grouped in five sections. The first section includes an introductory chapter which presents a communicative competence framework developed by the editors in order to highlight the key role the four skills play in language learning and teaching. The next four sections each represent a language skill: Section II is devoted to listening, Section III to speaking, Section IV to reading and Section V to writing. In order to provide an extensive treatment of each of the four skills, each section

starts with a theoretical chapter which briefly illustrates advances in the understanding of how each skill is likely to be learned and taught, followed by four didactically oriented chapters authored by leading international specialists. These pedagogical chapters deal specifically with four key topics: 1) areas of research that influence the teaching of a particular skill; 2) an overview of strategies or techniques necessary for developing a particular skill; 3) an approach to the academic orientation of a particular skill, and 4) unique aspects of teaching each skill. Moreover, all chapters incorporate two common sections: pre-reading questions at the beginning of the chapter in order to stimulate readers' interest in its content, and a section entitled suggested activities at the end of the chapter in order to allow readers put the ideas and concepts presented into practice. The accessible style and practical focus of the volume make it an ideal tool for teachers, teacher trainers, and teacher trainees who are involved in teaching the four language skills in a second or foreign language context.

This book is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge colleges as the basis for conditional offers. They are also used by Warwick University, and many other mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics is recommended as preparation for any undergraduate mathematics course, even for students who do not plan to take the Sixth Term Examination Paper. The questions analysed in this book are all based on recent STEP questions selected to address the syllabus for Papers I and II, which is the A-level core (i.e. C1 to C4) with a few additions. Each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anybody interested in advanced mathematics.
