Lesson 1:  
Middleware  
and Web  
Service (part  
1)

Loosely  
Coupled -  
Loosely  
coupled  
means that  
the client and  
the web  
service are  
not bound to  
each other,  
which means  
that even if  
the web  
service  
changes over  
time, it should  
not change  
the way the  
client calls the  
web service.  
Adopting a  
loosely  
coupled  
architecture  
tends to make  
software  
systems more  
manageable  
and allows  
simpler  
integration

between  
different  
systems.
