The Decline of Life is an ambitious and absorbing study of old age in eighteenth-century England. Drawing on a wealth of sources - literature, correspondence, poor house and workhouse documents and diaries - Susannah Ottaway considers a wide range of experiences and expectations of age in the period, and demonstrates that the central concern of ageing individuals was to continue to live

as independently as possible into their last days. Ageing men and women stayed closely connected to their families and communities, in relationships characterised by mutual support and reciprocal obligations. Despite these aspects of continuity, however, older individuals' ability to maintain their autonomy, and the nature of the support available to them once they did fall into necessity declined significantly in the last decades of the century. As a result, old age was increasingly marginalised. Historical demographers, historical gerontologists, sociologists, social historians and women's historians will find this book essential reading.

Cerebral palsy poses multiple diagnostic and therapeutic dilemmas. It is not only a medical and scientific issue, but also one with many social, ethical, and economic implications. With many contributions from top European specialists, this book begins with chapters on the history and

terminology, classification, incidence and prevalence, etiology, and neuropathology of cerebral palsy. Then diagnosis is covered with extensive chapters on the clinical characteristics of CP, differential diagnosis, and assessing with ultrasound, MRI, and nuclear/molecular imaging. Finally, detailed chapters provide comprehensive information on the newest treatment modalities for CP, including treatment with botulinum toxin, dorsal rhizotomy, intrathecal pharmacotherapy, stereotactic operations, and more. The book closes with chapters considering the psychological and psychosocial aspects of the condition. With its strong interdisciplinary foundation, this book is certain to be a valuable addition to the library of pediatricians, neurologists, and others who may be involved in the care of patients with cerebral palsy.

Homoeopathy Elsevier Health Sciences
This exciting new book is set to become the standard professional reference text on homoeopathy. A critical evaluation of the discipline, it reviews the known facts and defines the knowledge gaps, offering a reliable and much-needed critique of the uses of traditional homoeopathic

remedies. As its title suggests, 'Homoeopathy: a critical appraisal' takes an evaluative approach, reviews known facts and defines knowledge gaps. It discusses the findings of clinical trials and research into effectiveness and safety, drug 'provings', the placebo effect/response, and the socio-economic aspects of homoeopathy. Recommended for all medical and professional homoeopaths, students of homoeopathy, GPs and health care professionals.
Repertory to the Symptoms of Intermittent Fever "Elsevier, Urban & Fischer Verlag"
Mark Stevenson has been to the future a few years ahead of the rest of us - and reckons it has a lot going for it. His voyage of discovery takes him to Oxford to meet Transhumanists (they intend to live forever), to Boston where he confronts a robot with mood swings, to an underwater cabinet meeting in the Indian Ocean, and Australia to question the Outback's smartest farmer. He clammers around space planes in the Mojave desert, gets to grips with the potential of nanotechnology, delves deep into the possibilities of biotech, sees an energy renaissance on a printer, a revolution in communications,

has his genome profiled, and glimpses the next stage of human evolution ... and tries to make sense of what's in store. Insightful and often very funny, *An Optimist's Tour of the Future* is a book that tracks one curious man's journey to find out what's in store.

A companion publication to the international exhibition "Transcending Tradition: Jewish Mathematicians in German-Speaking Academic Culture", the catalogue explores the working lives and activities of Jewish mathematicians in German-speaking countries during the period between the legal and political emancipation of the Jews in the 19th century and their persecution in Nazi Germany. It highlights the important role Jewish mathematicians played in all areas of mathematical culture during the Wilhelmine Empire and the Weimar Republic, and recalls their emigration, flight or death after 1933.

The evidence-based medicine movement has been one of the most important influences on medicine in the latter half of

the 1990s. This textbook on evidence-based decision-making--basing clinical decisions on the best available evidence from systematic research--is ideal for healthcare, medical, and nurse managers. It explains how evidence-based decision making can be applied to health policy and management decisions about groups of patients and populations, rather than decisions about the treatment of individuals. Its first edition was well reviewed and highly successful, and this new edition builds upon the success of the first.

Causal Thinking in the Health Sciences B. Jain Publishers

Every week, tens of thousands of children across America are injected with the DPT (diphtheria-pertussis-tetanus) vaccine. The law requires it, and most children will get four DPT shots before they are two years old. But what if one of the components of the vaccine was not safe? What if it caused not only pain, swelling, screaming, and high fever, but also shock, convulsions, brain damage, and even death? And, to make matters worse, what if there were a safer alternative but parents didn't know about it? Wouldn't the

government require the drug manufacturers to produce the safer vaccine to protect the lives of the children who might otherwise suffer the shot's crippling side effects? The answer is, unfortunately, no. *A Shot in the Dark* is a chilling account of just how dangerous the whole-cell pertussis vaccine (the "P" part of the DPT shot) has proven to be. It provides accurate research into the history of the vaccine's development and usage. It exposes the roles played by the FDA and drug companies. It tells the tragic stories of the young victims of the vaccine. This book is also a guide for rightfully concerned parents who are looking for answers to important questions. What are the warning signs to look for to tell if your child is likely to be sensitive to the vaccine? What should parents ask their doctors about the vaccine and their child's medical profile? What is being done, here and in other countries, to combat this frightening situation? What can parents do now to help? *A Shot in the Dark* is a responsible, eye-opening look at a potential problem that every parent of every young child living in this country must face. Armed with the facts in this

important book, parents will be able to make informed decisions about their real medical options. Book jacket.

Neurocutaneous syndromes and hemangiomas encompass a substantial proportion of congenital or hereditary disorders, and present themselves through variable clinical features. Though often complex and multi-systemic, these disorders can mostly be diagnosed by simple visual inspections and strong clinical expertise. The purpose of this book is to compile in a single volume a comprehensive review of the historical perspective, the clinical features, the current knowledge concerning the pathogenesis, and the diagnostic and therapeutic strategies associated with these challenging disorders. Strong emphasis throughout is given on the biochemical, molecular, and genetic basis of these syndromes. The international editorial team have drawn upon contributions from colleagues, and from fully referenced information from

thousands of articles, thus providing the reader with an outstanding up-to-date resource for the diagnosis and treatment of neurocutaneous disorders.

Middleware is a critical foundation needed to leverage the development of a wide range of mobile and ubiquitous applications. Intrinsic challenges when building such middleware require the combination of expertise from areas like distributed systems, networking, software engineering, and application development. This textbook provides a comprehensive introduction to the main fundamental problems, technologies, paradigms, and

solutions of concern to developers of middleware for mobile environments. The contributions are grouped into four parts, on networking and programming issues, communication models, middleware issues, and application issues. Each chapter is structured as a self-contained tutorial, presenting an overview of a specific topic and the state-of-the-art solutions for the related problems. In addition, the book also includes an authoritative reference list. The material has been successfully used in several thematic training schools organized by the ESF MiNEMA (Middleware for Network Eccentric and Mobile Applications) program, and the book's organization and presentation is ideal for an advanced course on middleware.
