JACOBY ALEXANDER

Back from the Brink U of Minnesota Press
Our whole nation benefits from the preservation of natural habitats and their diversity of animal and plant species—yet small groups of private landowners often bear most of the costs of setting land aside for conservation purposes. This imbalance has generated many conflicts since the passage of the Endangered Species Act in 1973 and remains one of the most controversial issues to be resolved as the ESA makes its way through Congress for reauthorization. To provide policy makers, landowners, and

other stakeholders in the ESA debates with impartial baseline information, this book offers multidisciplinary perspectives on the role that private property plays in protecting endangered species in the United States. The opening chapter traces the evolution of the ESA and set forth the parameters of the debate over regulation of private property. Four subsequent chapters explore the judicial and economic implications of ESA and suggest how issues of scale and diversity affect the implementation of the ESA on private property. The volume concludes with eight principles to help frame the ongoing ESA reauthorization debate, developed by the University of Wyoming's Institute for Environment and Natural Resources Policy Board, the sponsor of the research

presented in this book.

Saving Animals from Fires National Geographic Books

Save the Bees! Save the Butterflies! Save the Turtles! But How? Every day people are talking about how another animal is on the verge of extinction, but rarely does anyone give SPECIFIC STEPS on how to help. It is important to know that it's not just up to the adults to solve this problem (besides most are really busy with their grown-up stuff!) - kids can step up and help save the animals, too! In this handbook you'll receive lots of fun ideas, activities, and resources to care for the animals you love! Here is your chance to really make an impact and become a champion for conservation. So let's get started saving bees to butterflies, wildlife

to farm life, and exotic to endangered!

Saving Endangered Species Orchard Books

Inside the Clark R. Bavin U.S. Fish and Wildlife Service Forensics Laboratory lies a rarely seen world, a CSI for wildlife, where a walk-in freezer contains carcasses and animal parts awaiting necropsies (animal autopsies); shelves and drawers hold pills, rugs, carvings, and countless other products made from parts of endangered animals; and a dedicated group of forensic scientists is responsible for victims from thirty thousand animal species.

Accomplished environmental journalist Laurel A. Neme goes behind the scenes at the wildlife forensics lab -- the only crime lab of its kind -- to reveal how its forensic scientists and the agents of the U.S. Fish and Wildlife Service are working to investigate wildlife crimes, protect endangered species, and stem illegal wildlife trafficking, the third largest illegal trade in the world. In three fascinating cases -- headless walrus washed up on the shores of Alaska, black bears killed for the healing powers of their gallbladders, and gorgeous feathered headdresses secretly shipped to the United States from the

Amazon -- Neme traces the USFWS's daring undercover investigations and how the scientists' innovative forensic techniques provide conclusive evidence of a crime. Throughout, she underscores the staggering international scope of the supply and demand for wildlife and animal parts. Filled with the suspense and thrilling detail of a crime novel yet driven by the all-too-real drama of a small band of scientists and investigators battling a lucrative, high-stakes underground industry, *Animal Investigators* is an engrossing account of crime and cutting-edge science.

Saving Sun Bears HarperCollins

This title was first published in 2000: The noble goals embodied in the Endangered Species Act are colliding with financial and social realities. Citizens increasingly face the costs of current policies, while initiatives which fail to respect liberty and property meet serious resistance at every turn. Despite widespread verbal support for saving species 'at any cost', when trade-offs become obvious, and values compete, support for these policies evaporates. This edited collection examines ethically and materially

responsible approaches to this problem, written by leading international figures from a variety of disciplines. The result is the most comprehensive and constructive analysis of the effectiveness and viability of endangered species protection available.

Saving Endangered Species Crabtree Publishing Company

Adult sun bears are poached for body parts which are thought to have medicinal properties. Orphaned cubs are kept illegally as pets. Natural habitat is disappearing fast. In this inspirational story, Malaysian ecologist Dr Wong Siew Te, or 'papa bear', tries to save the 'forgotten bear' from extinction. His quest takes him around the world, and in 2017 he is acknowledged as a CNN Wildlife Hero-proving one person can make a difference. Australian author Dr Sarah Pye takes readers on a journey of discovery, introducing individual sun bears she has come to know: Natalie, who learns to survive without her mother; Bongkud, who is struck by lightning; Gutuk, who is too scared to go outside; and Debbie, who grabs her chance at freedom. *Saving Sun Bears* is Wong's story-and theirs.

What happens when conservationists meet rhinos in trouble? They arrange to airlift them to safety! Follow National Geographic Explorers-in-Residence Dereck and Beverly Joubert as they move rhinos out of harm's way, meet a courageous little Hawaiian monk seal, and a pair of Siberian tiger cubs fighting for survival. Readers will cheer as they read these completely true stories of animal rescues. Filled with engaging photos, fast facts, and fascinating sidebars, readers won't want to put this book down.

Saving a Species Createspace

Independent Pub

This book is based on a belief we both fiercely share: That we are not separate from the Divine, not separate from other humans, and are inextricably interconnected with the Earth community, with a responsibility to protect and to live in humble and grateful harmony with the whole of creation.

Southern Lessons The Rosen Publishing

Group, Inc

On the morning of October 27, 2003, a police car skidded to a stop in front of Nancy Baar's house in San Diego. "You have ten minutes to get out of here!" the officer shouted. A huge wildfire was burning out of control in the mountains near Nancy's house and was quickly approaching her neighborhood. She had to leave quickly, but it wouldn't be easy. Nancy's four-acre (1.6-hectare) property was home to dogs, a horse, a pig, and 71 birds! There was no way she could move all the animals to safety in time. Would anyone save the animals that were left behind? In *Saving Animals from Fires*, readers will meet the courageous workers who risk their lives to rush into houses, forests, and rivers to rescue animals from fire and ash. From saving pet birds in California to rescuing koalas in Australia, the inspiring and true stories from around the world will warm the heart of any animal lover.

Rhino Airlift! Capstone Classroom

Thousands of animals are endangered. Scientists are working to save these species through captive breeding and releasing the animals into the wild. Young

readers discover practical ways they can help animals in their community.

Saving the Species You Love National Geographic Books

A probing examination of Western conservation efforts in Africa, where our feel-good stories belie a troubling reality. The stunningly beautiful Gorongosa National Park, once the crown jewel of Mozambique, was nearly destroyed by decades of civil war. It looked like a perfect place for Western philanthropy: revive the park and tourists would return, a win-win outcome for the environment and the impoverished villagers living in the area. So why did some researchers find the local communities actually getting hungrier, sicker, and poorer as the project went on? And why did efforts to bring back wildlife become far more difficult than expected? In pursuit of answers, Stephanie Hanes takes readers on a vivid safari across southern Africa, from the shark-filled waters off Cape Agulhas to a reserve trying to save endangered wild dogs. She traces the tangled history of Western missionaries, explorers, and do-gooders in Africa, from Stanley and Livingstone to Teddy Roosevelt, from Bono and the Live

Aid festivals to Greg Carr, the American benefactor of Gorongosa. And she examines the larger problems that arise when Westerners try to “fix” complex, messy situations in the developing world, acting with best intentions yet potentially overlooking the wishes of the people who live there. Beneath the uplifting stories we tell ourselves about helping Africans, she shows, often lies a dramatic misunderstanding of what the locals actually need and want. A gripping narrative of environmentalists and insurgents, poachers and tycoons, elephants and angry spirits, *White Man’s Game* profoundly challenges the way we think about philanthropy and conservation.

Saving Animals from Ourselves

Createspace Independent Publishing Platform

Humans have negatively affected many of Earth's species. Fortunately, human ingenuity can help care for these animals. This series examines six animal species that are in danger and investigates the various ways that people are attempting to protect them.

~**These economics of saving species**

for the future W. W. Norton & Company
Whether you would like to learn how to build a bird box, dig a hedgehog tunnel or implement broader environmental changes in your community, this practical guide to saving our most endangered species will teach you how you can help on an individual, local and national level.

Saving Animals Routledge

The wildlife veterinarian and environmental advocate shares highly visual profiles of amazing animals from around the world, covering subjects ranging from animal anatomy and behavior to the work of specialist caregivers and how kids can help protect endangered species.

Saving Endangered Plants and Animals

Bearport Publishing

The research paper "Extinction Risk from Climate Change" published in the journal *Nature* in January 2004 created front-page headlines around the world. The notion that climate change could drive more than a million species to extinction captured both the popular imagination and the attention of policy-makers, and provoked an unprecedented round of scientific critique. *Saving a Million Species*

reconsiders the central question of that paper: How many species may perish as a result of climate change and associated threats? Leaders from a range of disciplines synthesize the literature, refine the original estimates, and elaborate the conservation and policy implications. The book: examines the initial extinction risk estimates of the original paper, subsequent critiques, and the media and policy impact of this unique study presents evidence of extinctions from climate change from different time frames in the past explores extinctions documented in the contemporary record sets forth new risk estimates for future climate change considers the conservation and policy implications of the estimates. *Saving a Million Species* offers a clear explanation of the science behind the headline-grabbing estimates for conservationists, researchers, teachers, students, and policy-makers. It is a critical resource for helping those working to conserve biodiversity take on the rapidly advancing and evolving global stressor of climate change-the most important issue in conservation biology today, and the one for which we are least prepared.

Saving a Place: Endangered Species in the 21st Century University of Texas Press

"This is a guide to conservation regarding endangered species that live on private lands, including how to work with the laws surrounding conservation and private lands"--

Saving All the Parts Science Frontiers

In 2020, COVID-19, the Australia bushfires, and other global threats served as vivid reminders that human and nonhuman fates are increasingly linked. Human use of nonhuman animals contributes to pandemics, climate change, and other global threats which, in turn, contribute to biodiversity loss, ecosystem collapse, and nonhuman suffering. Jeff Sebo argues that humans have a moral responsibility to include animals in global health and environmental policy. In particular, we should reduce our use of animals as part of our pandemic and climate change mitigation efforts and increase our support for animals as part of our adaptation efforts. Applying and extending frameworks such as One Health and the Green New Deal, Sebo calls for reducing support for factory farming, deforestation,

and the wildlife trade; increasing support for humane, healthful, and sustainable alternatives; and considering human and nonhuman needs holistically. Sebo also considers connections with practical issues such as education, employment, social services, and infrastructure, as well as with theoretical issues such as well-being, moral status, political status, and population ethics. In all cases, he shows that these issues are both important and complex, and that we should neither underestimate our responsibilities because of our limitations, nor underestimate our limitations because of our responsibilities. Both an urgent call to action and a survey of what ethical and effective action requires, *Saving Animals, Saving Ourselves* is an invaluable resource for scholars, advocates, policy-makers, and anyone interested in what kind of world we should attempt to build and how. Saving Species Houghton Mifflin Harcourt Learn how employees at Smithsonian's National Zoo and Conservation Biology Institute are working hard to save animal species from extinction. Created in collaboration with the Smithsonian Institution, this Smithsonian Informational

Text builds reading skills while engaging students' curiosity about STEAM topics through real-world examples. Packed with factoids and informative sidebars, it features a hands-on STEAM challenge that is perfect for use in a makerspace and teaches students every step of the engineering design process. Make STEAM career connections with career advice from actual Smithsonian employees working in STEAM fields. Discover engineering innovations that solve real-world problems with content that touches on all aspects of STEAM: Science, Technology, Engineering, the Arts, and Math!

Saving Species on Private Lands Island Press

The only hope for successful conservation of America's threatened, endangered, and at-risk wildlife is through voluntary, cooperative partnerships that focus on private land, where over 75% of at-risk species can be found. Private landowners form the bedrock of these partnerships, and they have a long history of rising to meet the challenge of conservation. But they can't do it alone. This book is a guide for private landowners who want to

conserve wildlife. Whether engaged in farming, ranching, forestry, mining, energy development, or another business, private working lands all have value as wildlife habitat, with the proper management and financial support. This book provides landowners and their partners with a roadmap to achieve conservation compatible with their financial and personal goals. This book introduces the art and language of land management planning as well as regulatory compliance with laws such as the Endangered Species Act of 1973. It categorizes and explains the tools used by wildlife professionals to

implement conservation on private lands. Moreover it documents the multitude of federal, state, local, and private opportunities for landowners to find financial and technical assistance in managing wildlife, from working with a local NGO to accessing the \$6 billion per year available through the federal Farm Bill.

Animals on the Edge Clarion Books
 Finally - a hands-on Action Guide for Next Generation who are passionate about protecting the animals that share our world! Join youth from around the globe who are saving species and making a

difference by... Saving bees and planting pollinator gardens
 Eliminating the use of plastic bags to help save sea turtles
 Avoiding foods that contain palm oil in order to save Orangutans, and so much more!
 Children and teens have the opportunity to pick an animal they love, create a plan, and present the importance of protecting their favorite species. This Action Guide gives them the inside knowledge, know-how, and resources they need to lead and launch their own Personal Species Protection Plan(tm).
 Together let's create a better life for all living Creatures!
