Les ponts en arc font actuellement face au double défi de protéger leur patrimoine et de rivaliser avec d'autres formes plus récentes de structures. La conservation des ponts en arc implique de multiples impératifs : une politique saine d'inspection et de suivi, des méthodes précises d'investigation, une évaluation fiable et un éventuel diagnostic, des moyens efficaces de maintenance, de réparation, de renforcement et d'élargissement. Pendant que des ouvrages existants sont réparés et revalorisés, de nouveaux ponts en arc, de -nies traditionnelles et à " l'échelle humaine ", continuent à se construire, en utilisant des matériaux et procédés améliorés et rentables, assurant longévité et respect de l'environnement. Au premier plan de cette continuité, les concepteurs des ponts en béton, dans les hémisphères Nord et Sud, s'efforcent avec succès de réaliser des portées en arc de plus en plus longues, frôlant les 400 mètres dans les années 1980. Récemment, sur d'autres sites spectaculaires, des records de portées ont été battus par trois ponts en arc respectivement en pierre, en béton, en tubes d'acier remplis de béton. Une telle avancée ne manquera pas d'inciter les ingénieurs à rechercher des formes d'arc encore plus audacieuses et élégantes. Sur le large éventail des thèmes proposés, de nombreux auteurs, de plus de vingt-cinq pays, ont apporté des contributions majeures rappelant que les ponts en arc n'ont rien perdu de leur actualité et que, malgré les leçons assimilées de leur prestigieux héritage, leur conception stimule toujours la créativité des ingénieurs et des architectes. Ces contributions sont réunies dans le présent volume édité à l'occasion de la Troisième Conférence

internationale sur les Ponts en Arc, tenue à Paris en septembre 2001. Arch bridges face at present the double challenge of protecting their heritage and competing with other more recent structural forms. The conservation of the arch bridge heritage successively requires sound inspection and monitoring policies, accurate investigative methods, reliable assessment and eventual diagnosis, efficient means for maintenance, repair, strengthening and widening. While existing structures are being repaired and upgraded, new arch bridges, of traditional forms and on a "human scale", continue to be constructed, using improved and cost-effective materials and procedures, ensuring longevity and respect for the environment. In the forefront of this continuity, concrete bridge designers, in the northern and southern hemispheres, have successfully been striving for ever larger arch spans, closely approaching 400 m in the 1980's. Lately, at other spectacular sites, span records were beaten in three arch bridges respectively using stone, concrete and slender concrete-filled steel tubes. This breakthrough may encourage engineers to seek more daring and elegant forms of arch. On the broad spectrum of the suggested topics, numerous authors, from more than twenty-five countries, have recently offered major contributions, reminding that arch bridges have nothing lost of their appeal and that, for all the lessons learnt from their prestigious heritage, their design still simulates the creativity of engineers and architects. These contributions are put together in the present volume edited on the occasion of the Third International Arch Bridge Conference held in Paris in September 2001.

L'ouvrage que voici marque assurément un tournant décisif dans l'effort entrepris par les Africains de bonne foi de réhabiliter l'Histoire du Continent noir. Nous y découvrons que la notion de Dieu est une notion traditionnelle et intellectuelle africaine, les origines africaines des dieux de l'Olympe, les noms africains des dieux d'Égypte, les origines africaines du Judaïsme, du Christianisme et de l'Islam, les sources africaines de la démocratie parlementaire et du Droit, les sources vivifiantes de cette extraordinaire épopée qui conduira à l'émergence de la civilisation appelée égyptienne, le sens de l'iconographie des principales divinités de la vallée du Nil, les sources africaines de la franc-maçonnerie, les sources de la légende du Saint-Graal, l'objet de la circoncision, l'origine et la fonction des cathédrales, la fonction du sarcophage, les origines de la chimie et de la biologie, et les fondations africaines de Rome sont autant de sujets spécifiquement abordés.

This volume explores papal communication and its reception in the period c.1100-1300; it presents a range of interdisciplinary approaches and original insights into the construction of papal

authority and local perceptions of papal power in the central Middle Ages. Some of the chapters in this book focus on the visual, ritual and spatial communication that visitors encountered when they met the peripatetic papal curia in Rome or elsewhere, and how this informed their experience of papal self-representation. The essays analyse papal clothing as well as the iconography, architecture and use of space in papal palaces and the titular churches of Rome. Other chapters explore communication over long distances and analyse the role of gifts and texts such as letters, sermons and historical writings in relation to papal communication. Importantly, this book emphasises the plurality of responses to papal communication by engaging with the reception of papal messages by different audiences, both secular and ecclesiastical, and in relation to several geographic regions including England, France, Ireland, Italy and Switzerland. The chapters in this book were originally published as a special issue of the *Journal of Medieval History*.

Modern biology owes much to the study of favorable model systems which facilitates the realization of critical experiments and results in the introduction of new concepts. Examples of such systems are numerous and studies of them are regularly recognized by the scientific community. The 1983 Nobel Prize in Medicine and Physiology is a magnificent example in which *complanata* served as the experimental model. In a manner somewhat more modest, other biological systems have attracted recognition due to their critical phylogenetic position, or indeed because of their uniqueness which distinguishes them from all other organisms. Assuredly, among the whole assemblage of living organisms, sponges stand out as worthy of interest by scientists: they are simultaneously models, an important group in evolution, and animals unlike others. As early as the beginning of this century, sponges appeared as exceptional models for the study of phenomena of cell recognition. Innumerable works have been dedicated to understanding the mechanisms which assure the reaggregation of dissociated cells and the reconstitution of a functional individual. Today, research on these phenomena is at the ultimate, molecular level. Through an assemblage of characteristics the sponges are, based upon all available evidence, the most primitive Metazoans. Their tissues—perhaps one can say their cell groups—are loosely assembled (they possess no tight or gap junctions), cell differentiation appears highly labile, and they do not develop any true organs. But, they are most certainly Metazoans.

One of the major questions in the evolution of animals is the transition from unicellular to multicellular organization, which resulted in the emergence of Metazoa through a hypothetical Urmetazoa. The *Comparative Embryology of Sponges* contains abundant original and literary data on comparative embryology and morphology of the Porifera (Sponges), a group of 'lower Metazoa'. On the basis of this material, original typization of the development of Sponges is given and the problems concerning origin and evolution of Porifera and their ontogenesis are discussed. A morphogenetic interpretation of the body plan development during embryogenesis, metamorphosis and asexual reproduction in Sponges is proposed. Special attention is given to the analysis of characteristic features of the ontogenesis in Porifera. The book pursues three primary goals: 1) generalization of all existing information on individual development of sponges, its classification and a statement according to taxonomical structure of Porifera; 2) revealing of heterogeneity of morphogenesis and peculiarities of ontogeneses in various clades of Porifera, and also their correlations with the organization, both adult sponges, and their larvae; 3) revealing homology of morphogeneses in both Porifera and Eumetazoa, testifying to the general evolutionary roots of multicellular animals, and peculiar features of sponges' morphogeneses and ontogenesis. This book will be of interest to embryologists, zoologists, morphologists and researchers in evolutionary biology.
