In The Graduation thirteen-year-old Annie O'Brien is forced to attend a private school to hone her skills at being a woman. Annie sees this as an unfair act on the part of her parents. At the academy she learns other students have been abandoned by their families. Staunch-heartedly, she fights against the disciplinary actions of the nuns, seeking revenge. Torn between her friends at home and the academy's values, she becomes involved with an undesirable man, which changes the course of her life. The reader will empathize with the heroine as she fights a double standard, then falls in love only to be broadsided by disaster. Left on her own, she must make lifelong decisions at a very young age. Although the period falls in the 1950's, this story captures the same challenges that a teen faces today with relationships, abandonment, and abuse. This book is available with or without the Study Guide and gives the parent and the teenager an opportunity to consider other options that might be more effective and wouldn't widen the generation gap. The drama stands on its own as a gripping story without the Study Guide. Carolee has handcrafted her children's books to cross all age brackets. They offer the unique concept of Adult Fairy Tales. These simple values give remembrance to those forgotten with the passage of time. The Adult Fairy tales paired are Goodie RudeShoes: Series One, Billy BitterBetter: Series Two, and Granny NeatFreak. Other children's books are: The Mouse House and That Secret Part of Me. A variety of other works include From Silly to Sinister: adult short stories, book one and two, Navigating the Potholes of Life: humor, drama and adventure for teens and adults, A Reason to Dream: drama based on a true story for teens and adults, The Graduation boosts adventure, humor, drama for the teens and adults. With God in Mind: a thought provoking devotional for teens and adults. This book is available in Amazon's store as a paperback. <http://books2ckids.com> Thank you for your interest in her work.

John Joseph wants men to know, in no uncertain terms, that they don't need to eat steak, burgers, wings, ribs, or any other animal product, for that matter, to be strong—in fact, he would argue, eating animals is for the weak. Because when your protein sources come from animals, you're missing out on all of the nutritional benefits of a plant-based diet—a diet that can make you more fit, more sexy, and more manly. In *Meat is for Pussies*, Joseph presents a throw-down of information, offering both personal and scientific evidence that a plant-based diet offers the best path to athleticism, endurance, strength, and overall health. In addition to handily dispelling the myths surrounding meat, Joseph offers workout advice, a meal plan, and recipes that make going plant-based easy. Flavor and vitamin-packed options like the Working Man Stew and Veggie Chili with Cornbread will keep men's (and women's) bodies healthy and energized, while workouts that emphasize cardio and strength training build endurance and stamina and prove that you don't need meat to build muscle. Joseph also offers living proof that living a plant-based lifestyle is badass, from super-athlete Brendan Brazier to MMA champion Jake Shields to Joseph himself, who is an Ironman Triathlete and still rocking out (at the age of fifty-two) on world tours as the frontman for his legendary band the Cro-Mags. Joseph's passion for educating the world about the benefits of a plant-based diet comes through on each page, in a voice and a vocabulary that is uniquely his own. At the end of the day, he wants readers to live a long, healthy, happy life . . . and he won't take no for an answer.

Surveying for Construction 5e is an essential textbook for students of engineering new to surveying, and will also appeal to students of building and environmental studies and archaeology. Offering a strong grounding in land and construction surveying, the authors clearly and comprehensively guide the reader through the principles, methods and equipment used in modern-day surveying. Taking into account recent advances in the field, the material has been fully updated and revised throughout including new and up-to-date coverage of levelling, total stations, detail surveys, and EDM. A new chapter on GPS technology has been added. In keeping with the practical nature of the book, there are chapters on setting out construction works and surveying existing buildings, which guide the reader step-by-step through the fundamental procedures. The clear and methodical nature of the explanations, supported by a wide range of exercises and examples, make *Surveying for Construction 5e* an invaluable and modern introduction to surveying. Key features include:

- Fully updated coverage and new material throughout, including a new chapter on GPS
- New Learning Objectives and Chapter Summaries which guide the student through the learning process and highlight the key principles and methods for each chapter
- Numerous diagrams and figures which give students a clear and detailed understanding of equipment and procedures
- Extensive boxed examples and exercises that guide students through real-world surveying methods and calculations

The notion of 'sociality' is now widely used within the social sciences and humanities. However, what is meant by the term varies radically, and the contributors here, through compelling and wide ranging essays, identify the strengths and weaknesses of current definitions and their deployment in the social sciences. By developing their own rigorous and innovative theory of human sociality, they re-set the framework of the debate and open up new possibilities for conceptualizing other forms of sociality, such as that of animals or materials. Cases from Asia, Africa, the Americas and Europe

explore the new directions of human sociality, illuminating how and why it is transformed when human beings engage with such major issues as economic downturn, climate change, new regimes of occupational and psychological therapy, technological innovations in robotics and the creation of new online, 'virtual' environments. This book is an invaluable resource, not only for research and teaching, but for anyone interested in the question of what makes us social.

If a picture is worth a thousand words, then it's a good bet that at least half of those words relate to the picture's copyright status. Art historians, artists, and anyone who wants to use the images of others will find themselves awash in byzantine legal terms, constantly evolving copyright law, varying interpretations by museums and estates, and despair over the complexity of the whole situation. Here, on a white—not a high—horse, Susan Bielstein offers her decades of experience as an editor working with illustrated books. In doing so, she unsnarls the threads of permissions that have ensnared scholars, critics, and artists for years. Organized as a series of “takes” that range from short sidebars to extended discussions, *Permissions, A Survival Guide* explores intellectual property law as it pertains to visual imagery. How can you determine whether an artwork is copyrighted? How do you procure a high-quality reproduction of an image? What does “fair use” really mean? Is it ever legitimate to use the work of an artist without permission? Bielstein discusses the many uncertainties that plague writers who work with images in this highly visual age, and she does so based on her years navigating precisely these issues. As an editor who has hired a photographer to shoot an incredibly obscure work in the Italian mountains (a plan that backfired hilariously), who has tried to reason with artists' estates in languages she doesn't speak, and who has spent her time in the archival trenches, she offers a snappy and humane guide to this difficult terrain. Filled with anecdotes, asides, and real courage, *Permissions, A Survival Guide* is a unique handbook that anyone working in the visual arts will find invaluable, if not indispensable.

Biomedical scientists are the foundation of modern healthcare, from cancer screening to diagnosing HIV, from blood transfusion for surgery to food poisoning and infection control. Without biomedical scientists, the diagnosis of disease, the evaluation of the effectiveness of treatment, and research into the causes and cures of disease would not be possible. The *Fundamentals of Biomedical Science* series has been written to reflect the challenges of practicing biomedical science today. It draws together essential basic science with insights into laboratory practice to show how an understanding of the biology of disease is coupled to the analytical approaches that lead to diagnosis. Assuming only a minimum of prior knowledge, the series reviews the full range of disciplines to which a Biomedical Scientist may be exposed - from microbiology to cytopathology to transfusion science. A core text in the *Fundamentals of Biomedical Science* series, *Biomedical Science Practice* gives a comprehensive overview of the key laboratory techniques and professional skills that students need to master. The text is supported throughout with engaging clinical case studies, written to emphasize the link between theory and practice, providing a strong foundation for beginning biomedical science students.

This book is about equity in health and health care. It explores why, despite being seen as an important goal, health equity has not made more progress within countries and globally, and what needs to change for there to be greater success in delivering fairness. An international team of eminent experts from primarily the field of health economics describe how equity in health and health care might develop over the next decade. They examine existing and past barriers to promoting equity, citing case examples, and covering issues including access to health services and inequalities between and within countries. The analyses are detailed, but the issues are approached in an accessible fashion, highlighting the factors of common international relevance. This book provides a manifesto for achieving health equity for the future. It will be essential reading for health and social policy makers, and health academics nationally and internationally.

Psychosocial Rehabilitation is a comprehensive ready-reference for mental health practitioners and students, providing practical advice on the full range of interventions for psychosocial rehabilitation. It contextualises the interventions described and provides pointers to enable the reader to explore the theory and research. This manual recognises the wide-ranging impact of mental illness and its ramifications on daily life, and promotes a recovery model of psychosocial rehabilitation and aims to empower clinicians to engage their clients in tailored rehabilitation plans. The book is divided into five key sections. Section 1 looks at assessment covering tools available in the public domain, instruments, scoring systems, norms and applications for diagnosis and measurement of symptoms, cognitive functioning, impairment and recovery. Section 2 covers the full range of therapeutic interventions and offers advice on training and supervision requirements and evaluation of process, impact and outcome. Section 3 provides manuals and programs for interventions effectively provided as group activities. Section 4 explains how to design a full programme that integrates therapeutic interventions with group programmes as well as services provided by other agencies. The final section looks at peer support and self help, providing manuals and resources that support programmes and interventions not requiring professional or practitioner direction.

Technological pedagogical content knowledge (TPCK) reflects a new direction in understanding the complex interactions among content, pedagogy, learners and technology that can result in successful integration of multiple technologies in teaching and learning. The purpose of this edited volume is to introduce TPCK as a conceptual framework for grounding research in the area of teachers' cognitive understanding of the interactions of technology with content, pedagogy and learner conceptions. Accordingly, the contributions will constitute systematic research efforts that use TPCK to develop lines of educational technology research exemplifying current theoretical conceptions of TPCK and methodological and pedagogical approaches of how to develop and assess TPCK.

How adequate are our theories of globalisation for analysing the worlds we share with others? In this provocative new book, Henrietta Moore asks us to step back and re-examine in a fresh way the interconnections normally labeled 'globalisation'. Rather than beginning with abstract processes and flows, Moore starts by analyzing the hopes, desires and satisfactions of individuals in their day-to-day lives. Drawing on a wide range of examples, from African initiation rituals to Japanese anime, from sex in virtual worlds to Schubert songs, Moore develops a theory of the ethical imagination, exploring how ideas about the human subject, and its capacities for self-making and social transformation, form a basis for reconceptualizing the role and significance of culture in a global age. She shows how the ideas of social analysts and ordinary people intertwine and diverge, and argues for an ethics of engagement based on an understanding of the human need to engage with cultural problems and seek social change. This innovative and challenging book is essential reading for anyone interested in the key debates about culture and globalization in the contemporary world.

While Universal's Dracula and Frankenstein (both 1931) have received the most coverage of any of the studio's genre releases, it is the lesser known films that have long fascinated fans and historians alike. Starting with The Last Warning, a 1929 movie released as both a silent and a talkie, Universal provided a decade of films that entertained audiences and sometimes frustrated critics. Each of Universal's horror, science fiction and "twisted mystery" films receives an in-depth essay for each film. The focus is first on the background to the making of the movie and its place in the Universal catalog. A detailed plot synopsis with critical commentary follows. Filmographic data for the film conclude the entry. Universal's The Shadow short film series is covered in an appendix. Many rare illustrations and movie posters are also included.

This book, first published in 1985, examines the problem of nationality in the Soviet empire. Nationality issues affect many of the critical domestic and foreign policy questions that faced the Soviet leadership. Nationality trends in the 1980s conduced to make the relationship between Soviet domestic nationality concerns and Soviet foreign policy clearer: the problem both affected and was affected by its strategic environment. This book analyses this environment and the forces at work within it.
