This book explores the challenges facing food security, sustainability, sovereignty, and supply chains in the Arctic, with a specific focus on Indigenous Peoples. Offering multidisciplinary insights and with a particular focus on populations in the European High North region, the book highlights the importance of accessible and sustainable traditional foods for the dietary needs of local and Indigenous Peoples. It focuses on foods and natural products that are unique to this region and considers how they play a significant role towards food security and sovereignty. The book captures the tremendous complexity facing populations here as they strive to maintain sustainable food systems – both subsistent and commercial – and regain sovereignty over traditional food production policies. A range of issues are explored including food contamination risks, due to increasing human activities in the region, such as mining, to changing livelihoods and gender roles in the maintenance of traditional food security and sovereignty. The book also considers processing methods that combine indigenous and traditional knowledge to convert the traditional foods, that are harvested and hunted, into local foods. This book offers a broader understanding of food security and sovereignty and will be of interest to academics, scholars and policy makers working in food studies; geography and environmental studies; agricultural studies; sociology; anthropology; political science; health studies and biology.

Black, Indigenous, and Peoples of Color--reimagine library and information science through the lens of critical race theory. In *Knowledge Justice, Black, Indigenous, and Peoples of Color* scholars use critical race theory (CRT) to challenge the foundational principles, values, and assumptions of Library and Information Science and Studies (LIS) in the United States. They propel CRT to center stage in LIS, to push the profession to understand and reckon with how white supremacy affects practices, services, curriculum, spaces, and policies.

Insects as Human Food Frontiers Media SA

Insect Pathology is designed for a broad spectrum of readers. It should be useful to students, lecturers, and researchers requiring information about the principles in insect pathology and the biology of pathogens. It should serve as a resource for specialists to learn about other insect

pathogen systems, for generalists to become aware of advances in insect pathology, and for scientists and students, beginning or otherwise, interested in learning about insect pathology. This book was originally intended to update the 1949 text by E. A. Steinhaus entitled *Principles of Insect Pathology*. The purpose for this book was twofold: To serve (1) as a text for an insect pathology and/or biological control class and (2) as a comprehensive reference source. Because this book summarizes much of the available information, its usefulness as a textbook for an insect pathology class is apparent. Although the literature citations are extensive, they are far from complete. The literature in insect pathology is voluminous and for the past decade has been expanding at an almost exponential rate. A complete review of the literature is beyond the scope of the book, and an omission of a reference does not preclude its importance. Our citations, however, should serve as a good starting point for those who wish to obtain further information. We have attempted to cover equally all subdisciplines, but shortcomings are unavoidable. For these, we take full responsibility. Recent advances in the study of bats have changed the way we understand this illusive group of mammals. This volume consists of 25 chapters and 57 authors from around the globe all writing on the most recent findings on the evolution, ecology and conservation of bats. The chapters in this book are not intended to be exhaustive literature reviews, but instead extended manuscripts that bring new and fresh perspectives. Many chapters consist of previously unpublished data and are repetitive of new insights and understanding in bat evolution, ecology and conservation. All chapters were peer-reviewed and revised by the authors. Many of the chapters are multi-authored to provide comprehensive and authoritative coverage of the topics.

Women as Global Leaders is the second volume in the new *Women and Leadership: Research, Theory, and Practice* book series published for the International Leadership Association by IAP. Global leadership is an emerging area of research, with only a small but growing published literature base. More specifically, the topic of women's advances and adventures in leading within the global context is barely covered in the existing leadership literature. Although few women are serving in

global leadership roles in corporate and non-profit arenas, and as heads of nations, that number is growing (e.g., Indira Nooyi at PepsiCo, Sheryl Sandberg at Facebook, Marissa Mayer at Yahoo, Ellen Johnson Sirleaf as president of Liberia, Angela Merkel as chancellor of Germany). The purpose of this volume is to provide the reader with current conceptualizations and theory related to women as global leaders, recent empirical investigations of the phenomenon, analysis of effective global leadership development programs, and portraits of women who lead, or have led, in a global role. The volume is divided into four sections. The first section covers the state of women as global leaders, containing chapters by Joyce Osland and Nancy Adler, pioneers in the field of global and/or women's leadership. The second section describes approaches to women's global leadership. The third section offers an analysis of programs that are useful in developing women as global leaders, with the final section profiling women as global leaders, including Margaret Thatcher, Nobel Laureate Malala Yousfzai, and Golda Meir. As Barbara Kellerman noted in the Foreword, "this book... should be understood as a collection whose time has come, precisely because women now have opportunities to lead that are far more expansive than they were even in the recent past. Though their numbers remain low, they are able in some cases to exercise leadership not only as outsiders, but also as insiders, from the very positions of power and authority to which men forever have had access."

The third edition of the Historical Dictionary of the Democratic Republic of the Congo looks back at the nearly 48 years of independence, over a century of colonial rule, and even earlier kingdoms and groups that shared the territory. This is done through a chronology, an introductory essay, a bibliography, and over 800 cross-referenced dictionary entries on civil wars, mutinies, notable people, places, events, and cultural practices.

The book illuminates the political process that over the course of six generations brought about the personalization of authority in Liberia; and it links that system of personal rule to the highly centralized structures of the postcolonial state. The book concludes by exploring the future of self-governance in Liberia and all of postcolonial Africa. The author became president of the Republic of Liberia after the civil war 1989-90.

Improving learning evidence and outcomes for those most in need in developing countries is at the

heart of the United Nations' Sustainable Development Goal on Education (SDG4). This timely volume brings together contributions on current empirical research and analysis of emerging trends that focus on improving the quality of education through better policy and practice, particularly for those who need improved 'learning at the bottom of the pyramid' (LBOP). This volume brings together academic research experts, government officials and field-based practitioners. National and global experts present multiple broad thematic papers - ranging from the effects of migration and improving teaching to the potential of educational technologies, and better metrics for understanding and financing education. In addition, local experts, practitioners and policymakers describe their own work on LBOP issues being undertaken in Kenya, India, Mexico and Ivory Coast. The contributors argue persuasively that learning equity is a moral imperative, but also one that will have educational, economic and social impacts. They further outline how achieving SDG4 will take renewed and persistent effort by stakeholders to use better measurement tools to promote learning achievement among poor and marginalized children. This volume builds on the second international conference on Learning at the Bottom of the Pyramid (LBOP2).* It will be an indispensable resource for policymakers, researchers and government thinktanks, and local experts, as well as any readers interested in the implementation of learning equity across the globe. *The first volume Learning at the Bottom of the Pyramid (LBOP1), may be obtained at:

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Although the majority of consumed insects are gathered in forest habitats, mass-rearing systems are being developed in many countries. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food

security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them for food and feed. It examines the body of research on issues such as insect nutrition and food safety, the use of insects as animal feed, and the processing and preservation of insects and their products. It highlights the need to develop a regulatory framework to govern the use of insects for food security. And it presents case studies and examples from around the world. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. To fully realise this potential, much work needs to be done by a wide range of stakeholders. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

Insects will be appearing on our store shelves, menus, and plates within the decade. In *The Insect Cookbook*, two entomologists and a chef make the case for insects as a sustainable source of protein for humans and a necessary part of our future diet. They provide consumers and chefs with the essential facts about insects for culinary use, with recipes simple enough to make at home yet boasting the international flair of the world's most chic dishes. Insects are delicious and healthy. A large proportion of the world's population eats them as a delicacy. In Mexico, roasted ants are considered a treat, and the Japanese adore wasps. Insects not only are a tasty and versatile ingredient in the kitchen, but also are full of protein. Furthermore, insect farming is much more sustainable than meat production. *The Insect Cookbook* contains delicious recipes; interviews with top chefs, insect farmers, political figures, and nutrition experts (including chef René Redzepi, whose establishment was elected three times as "best restaurant of the world"; Kofi Annan, former secretary-general of the United Nations; and Daniella Martin of *Girl Meets Bug*); and all you want to know about cooking with insects, teaching twenty-first-century consumers where to buy insects, which ones are edible, and how to store and prepare them at home and in commercial spaces.

Chikungunya and Zika Viruses: Global Emerging Health Threats is the go-to resource for both historical and current information on this important virus that is rapidly increasing its global range. Epidemics since 2005 have spread from Africa and Asia, and through Europe, and an ongoing epidemic has caused nearly two million cases in the Americas. It causes severe crippling arthritis, with symptoms lasting for months or years. As no vaccine or treatment is available, there is international interest in the virus, thus funding opportunities for research have dramatically increased. This book presents our understanding of the virus, bringing comprehensive knowledge in a single source. This account provides the first comprehensive coverage of the insect and other arthropod pests in the urban environment worldwide. Presented is a brief description, biology, and detailed information on the development, habits, and distribution of urban and public health pests. There are 570 illustrations to accompany some of the major pest species. The format is designed to serve as a ready-reference and to provide basic information on orders, families, and species. The species coverage is international and based on distribution in domestic and peridomestic habitats. The references are extensive and international, and cover key papers on species and groups. The introductory chapters overview the urban ecosystem and its key ecological components, and a review of the pests status and modern control strategies. The book will serve as a professional training manual, and handbook for the pest control professionals, regulatory officials, and urban entomologists. It is organized alphabetically throughout.

Within the continuum of reproductive health care, antenatal care provides a platform for important

health-care functions, including health promotion, screening and diagnosis, and disease prevention. It has been established that, by implementing timely and appropriate evidence-based practices, antenatal care can save lives. Endorsed by the United Nations Secretary-General, this is a comprehensive WHO guideline on routine antenatal care for pregnant women and adolescent girls. It

aims to complement existing WHO guidelines on the management of specific pregnancy-related complications. The guidance captures the complex nature of the antenatal care issues surrounding healthcare practices and delivery, and prioritizes person-centered health and well-being --- not only the prevention of death and morbidity --- in accordance with a human rights-based approach.
