The Global Coal Market

The depletion of South

Africa's (and in some cases the world's) natural resources and the degradation of environmental sinks (including the atmosphere, lakes and rivers, and land) are continuing at such a rate that natural resource prices are climbing and many critical ecosystem services that underpin human welfare are increasingly threatened. The concept of the 'green economy' has gained increasing traction in South African policy discourses over the past

few years. However, in much of this discourse it is viewed in a piecemeal way as one part or sector of the economy (e.g. an industrial sector dealing with manufacture and installation of renewable energy technologies and energy-efficient equipment and appliances). In the view of the authors, 'greening the South African economy' requires an application of sustainability principles and practices across the full range of primary, secondary and tertiary sectors of the economy in

an integrated manner. The aim of this book is therefore to apply principles of sustainability and 'green economics' to the entire South African socio-economic system and its major elements in an integrated and comprehensive manner. Managing Business Risk Africa Institute of South Africa
When Nelson Mandela emerged from decades in jail to preach reconciliation, South Africans truly appeared a people reborn as the Rainbow Nation. Yet, a

quarter of a century later, the country sank into bitter recriminations and rampant corruption under Jacob Zuma. Why did this happen, and how was hope betrayed? President Cyril Ramaphosa, who is seeking to heal these wounds, is due to lead the African National Congress into an election by May 2019. The ANC is hoping to claw back support lost to the opposition in the Zuma era. This book will shed light on voters' choices and analyze the election outcome as the results emerge. With

chapters on all the major issues at stake--from education to land redistribution--*Understanding South Africa* offers insights into Africa's largest and most diversified economy, closely tied to its neighbors' fortunes. *Understanding South Africa* Kogan Page Publishers
While sharing some characteristics with other middle-income countries, South Africa is a country with a unique economic history and distinctive economic features. It is a

regional economic powerhouse that plays a significant role, not only in southern Africa and in the continent, but also as a member of BRICS. However, there has been a lack of structural transformation and weak economic growth, and South Africa faces the profound triple challenges of poverty, inequality, and unemployment. Any meaningful debate about economic policies to address these challenges needs to be informed by a deep understanding of historical developments,

robust empirical evidence, and rigorous analysis of South Africa's complex economic landscape. This volume seeks to provide a wide-ranging set of original, detailed, and state-of-the-art analytical perspectives that contribute to scientific knowledge as well as to well-informed and productive discourse on the South African economy. While concentrating on the more recent economic issues facing South Africa, the handbook also provides historical and

political context. It offers an in-depth examination of strategic issues in the country's key economic sectors, and brings together diverse analytical perspectives. *Anatomy of State Capture* IDRC Fossil fuel subsidies strain public budgets, and contribute to climate change and local air pollution. Despite widespread agreement among experts about the benefits of reforming fossil fuel subsidies, repeated international commitments to eliminate

them, and valiant efforts by some countries to reform them, they continue to persist. This book helps explain this conundrum, by exploring the politics of fossil fuel subsidies and their reform. Bringing together scholars and practitioners, the book offers new case studies both from countries that have undertaken subsidy reform, and those that have yet to do so. It explores the roles of various intergovernmental and non-governmental institutions in promoting

fossil fuel subsidy reform at the international level, as well as conceptual aspects of fossil fuel subsidies. This is essential reading for researchers and practitioners, and students of political science, international relations, law, public policy, and environmental studies. This title is also available as Open Access. *Secondary Cities and Development* African Sun Media
This book addresses hot issues pertaining to the manner in which corporate South Africa has

engaged the emerging green global economy. Firstly, the book profiles the green and low carbon economy landscape in South Africa and interfaces it with global trends. This way, the book aligns very well in terms of the Rio+20 outcomes on 'The Future We Want' that fully embraces the green global economy in the context of sustainable development and poverty eradication. The rest of the chapters in the book profile breakthroughs from selected companies. The book also comes as

the second in a series that is addressing global and national concerns on the green global economy agenda. The first book entitled 'Green Economy and Climate Mitigation: Topics of Relevance to Africa' was produced as part of the 17th Session of the Conference of Parties' collaborative work carried out by the Institute of Global Dialogue, the Africa Institute of South Africa and Unisa's Institute for Corporate Citizenship. The book 'Breakthrough: Corporate South Africa in the Green

Economy' comes in seven parts. Part I focuses on the Green Economy Landscape. This part considers both the international and national perspectives. Parts II-VI present different sector initiatives namely: Mining and Energy (Part II), Banking and Insurance (Part III), Forest and Paper (Part IV), Industrial (Part V) and Retailing and Aviation (Part VI). The last part is made up of a single chapter dealing with Emerging Issues and Way Forward.

 Women-owned businesses represent one third of the small and medium-sized enterprises of developing countries, but only a fraction of government procurement opportunities for goods and services. This guide helps governments understand what measures to put in place so that more women-owned businesses have access to this important market, which often

accounts for 15-20% of GDP. It includes practical national case examples, checklists and overviews for busy decision-makers as well as guidelines for implementation.

[A New Scramble for Africa?](#) Oxford Business

Group
How to Steal a Country describes the vertiginous decline in political leadership in South Africa from Mandela to Zuma and its terrible consequences. Robin Renwick's account reads in parts like a novel – a crime novel – for Sherlock Holmes old adversary, Professor Moriarty, the erstwhile Napoleon of Crime, would have been impressed by the ingenuity, audacity and sheer scale of the looting of the public purse, let alone the impunity with

which it has been accomplished. Based on Renwick's personal experiences of the main protagonists, it describes the extraordinary influence achieved by the Gupta family for those seeking to do business with state-owned enterprises in South Africa, and the massive amounts earned by Gupta related companies from their associations with them. The ensuing scandals have engulfed Bell Pottinger, KPMG, McKinsey and other multinationals. The

primary responsibility for this looting of the state however, rests squarely with President Zuma and key members of his government. But South Africa has succeeded in establishing a genuinely non-racial society full of determined and enterprising people, offering genuine hope for the future. These include independent journalists, black and white, who refuse to be silenced, and the judges, who have acted with courage and independence. The book concludes that change will

come, either by the ruling party reverting to the values of Mandela and Archbishop Tutu, or by the reckoning it otherwise will face one day.

Global energy consumption will increase rapidly in the next decades. The discrepancy between demand and supply is worrisome within the old and new cores of the world-economy. Sub-Saharan Africa meanwhile possesses vast potential for energy resources to be further exploited. Whilst

the Global North is a traditional player in the sub-Saharan energy sector, new actors from emerging economies - especially China's state-owned enterprises but also Brazilian, Indian and South African giants - have entered what appears to be a scramble for the largely untapped energy resources of the region. This book is the first to bring together comparative perspectives on: · The strategies of state and non-state actors involved in the exploitation of sub-

Saharan energy resources. · The potential and pitfalls of new forms of cooperation on energy southwards of the Sahara. · The domestic opportunities and challenges of the present energy resource boom. Dynamics on the international level are brought together with local developments to provide up-to-date insights on the scramble for energy resources in sub-Saharan Africa. This book also advances a materialist approach applicable in geographical

and political-scientific research, showing that much insight can be gained by concentrating on the material environment that shapes economic and political phenomena.

'As the world economic system stumbles, as trade wars intensify and the dangers of a diminishing global multilateralism threaten, Davies' new book offers a unique blend of astute analysis and personal experience. It is a must-read.' –

Jeremy Cronin, former Deputy Minister of Transport Africa's past quarter century has been shaped by the decisions and reach of one of the oldest political alliances in southern Africa, that between the African National Congress and the South African Communist Party. In this memoir, Rob Davies, one of the government's most articulate former senior ministers, looks back on the politics, policies and inner workings of the South African government in the democratic era. He

offers and insider's account of the evolution of trade and economic policy over the last 25 years, up to the presidency of Cyril Ramaphosa and the global impact of the COVID-19 pandemic. Leavened with intriguing anecdotes and informed by the author's very personal and humanising history of activism and exile, *Towards a New Deal* makes the case for an economic policy transformation that is focused on creating jobs and reducing poverty,

that highlights South Africa's role in Africa, and that addresses the challenges of economic stagnation, climate change and the fourth industrial revolution. It will be essential reading for economists, businesspeople and ordinary readers keen to grasp the political and economic dynamics of the moment.

[The Politics of Fossil Fuel Subsidies and Their Reform](#) OECD Publishing
An original contribution to our understanding of a phenomenon that is

reshaping the world, this title thoroughly discusses the transformation of the energy security policy arena brought on by two dramatic developments – the increased potential availability of energy in many parts of the world on the supply side, and on the demand side increasing concerns over the harmful effects on the environment brought on by the use of fossil fuels. An in depth discussion specifically focuses on what energy security means to different countries, and examines

which of those countries appear to be managing their energy/climate transitions successfully and which are having a more difficult time adapting to the new environment. Part 1 introduces the topic, covering the main themes and provides an overview of the chapters Part 2 provides a framework for policy evaluation, considering the evolving factors affecting energy security and the energy/climate policy trilemma Parts 3 to 6 discuss energy transitions

in the carbon producing countries (Saudi Arabia, Canada, Iran, Russia, Mexico), in intermediate carbon/producing/consuming countries (China, United States, UK, Brazil, Argentina, South Africa), in carbon consuming countries (Germany, Japan, South Korea, Israel, India, Spain) and finally in carbon reduction countries (France, Denmark, Switzerland) Part 7 looks at attempts at regional/international cooperation Part 8 considers the prospects for the future, examining

technological breakthroughs. This title builds on the theme of unfolding energy transformations driven by, but increasingly constrained by climate/environmental considerations. It is ideal for researchers and students in the areas of environmental politics and policy, climate change, and energy and climate security, as well as for academics and professionals. *The Oxford Companion to the Economics of South Africa* Routledge

This book focuses on the material city and its institutions and shows that, without recourse to a big new theory, urban leaders have devised mechanisms of ordinary government. They have done so through the resolution of practical and essential problems: providing electricity, drinking water, sanitation, transportation. In the originality of its hypotheses and the precision of the analyses carried out in the four case study cities of Shanghai, Mumbai, Cape

Town and Santiago de Chile, this work is addressed to all those interested in the life of cities: politicians, local and central government officials, executives in urban companies, researchers and students. *Nuclear News* Simon and Schuster
 What will it take to turn South Africa around? In this insightful and provocative book, Frans Rautenbach proposes a complete overhaul of policy thinking, and provides fresh arguments that effectively address

South Africa's unemployment, race problems and lack of education. Rautenbach examines the fundamental problem of rent-seeking, to which he proposes two antidotes: the free market and decentralisation of government. Along the way he tackles holy cows such as affirmative action, trade unions, labour law and welfare payments. He also addresses contentious topics such as racism, white privilege, political correctness, state funding of higher

education and mounting evidence that trade unions substantially suppress employment growth. Written by a labour lawyer with a proven track record in a range of policy issues, *South Africa Can Work* speaks effectively to a cross-section of readers of all disciplines, and brings sorely needed good news. *Breakthrough: Corporate South Africa in a Green Economy* Routledge

The role secondary cities play in the global space economy and national urban hierarchies is

increasingly receiving attention from scholars and international agencies, most notably the Cities Alliance. *Secondary Cities and Development* considers the role of secondary cities through the lens of South Africa, a middle-income country with characteristics of both the developed and developing worlds. This book brings together a broad overview of international literature on secondary cities in South Africa and mirrors them against global experience. Chapters

emphasize the importance of secondary cities as regional services areas, their potential roles in rural development, the vulnerabilities to which they are prone and their significant potential. By means of review, six South African case studies, and an assessment of contemporary policy approaches towards these cities, this unique volume provides insight into a spectrum of globally significant challenges. This book would be of interest to academics and

policy makers working in urban studies or regional development.

Risk management is the identification, assessment and prioritization of risks, and effective risk management is a vital consideration when

looking to safeguard your company's commercial future and deal with the latest regulatory requirements. Managing Business Risk will enable your company to maintain the clearest possible controls on risks that may threaten your business while at the same time delivering transparent reporting to your stakeholders. The book examines the key areas of risk you need to consider in today's competitive and complex business market. Drawing on expert advice from leading risk

consultants, lawyers and regulatory authorities, it shows you how to protect your business against a rising tide of business risks. If you don't build risk controls into the structure of your company, from the boardroom down, then your business could be vulnerable to a number of threats - both internal and external. Identify and neutralise them now, and give your company a competitive advantage.

The Statesman's

Yearbook 2013 Kluwer Law International B.V. South Africa is awash with policy failures, and policy confusion. We argue firstly, that our current discord over policy details has its origin in the (celebrated) negotiated transition. We hold that the vote count of an 85% majority in the Constituent Assembly in 1996 obscured the reality

that the Constitution meant different things to different negotiators. The result was that South Africa, from the very start of the democratic era, lacked a national consensus on how to go about consolidating democracy. We keep on failing to build a proper roof over our democracy because the constitutional foundations are weak.ÿ
