Renowned social justice advocate John A. Powell persuasively argues that we have not achieved a post-racial society and that there is much work to do to redeem the American promise of inclusive democracy. Culled from a decade of writing about social justice and spirituality, these meditations on race, identity, and social policy provide an outline for laying claim to our shared humanity and a way toward healing ourselves and securing our future. *Racing to Justice* challenges us to replace attitudes and institutions that promote and perpetuate social suffering with those that foster relationships and a way of being that transcends disconnection and separation.

The OECD Programme for International Student Assessment (PISA) examines what students know in reading, mathematics and science, and what they can do with what they know. This is one of six volumes that present the results of the PISA 2018 survey, the seventh round of the triennial assessment. Volume IV, *Are Students Smart about Money?*, examines 15-year-old students' understanding about money matters in the 20 countries and economies that participated in this optional assessment.

Anthony has two dollars and three quarters and one dime and seven nickels and eighteen pennies. Nicholas has one dollar and two quarters and five dimes and five nickels and thirteen pennies.

Alexander has...bus tokens. And even when he's rich, pretty soon all he has is bus tokens. He was rich. Last Sunday. Grandma Betty and Grandpa Louie came and gave Anthony and Nicholas and Alexander each a dollar. Alexander was saving his. Maybe for a walkie-talkie. And then there was bubble gum, some bets with Anthony and Nicholas (that Alexander lost), a snake rental, a garage sale, and all kinds of other things to spend money on. And now all he has is bus tokens. When he used to be rich last Sunday.

A comprehensive overview of the development of language studies from the ancient Greeks through modern theorists, this book focuses on determining what the enduring issues in linguistics are, what concepts have changed, and why. Francis P. Dinneen, SJ, defines the basic terminology of the discipline as well as different linguistic theories, and he frequently compares underlying assumptions in contemporaneous science and linguistics. *General Linguistics* traces the history of linguistics from ancient Greek works on grammar and rhetoric through the medieval roots of traditional grammar and its assumption that there is a norm for correct speech. Dinneen marks the beginning of modern linguistics with Saussure's concept of an autonomous linguistic structure

independent of socially imposed norms, and he details the theoretical contributions of Sapir, Bloomfield, Hjelmslev, Chomsky, Pike, and others. Dinneen considers the relative merits of the different theories and models, evaluating their claims and shortcomings. A thorough introduction to linguistics for newcomers to the field, this book will also be valuable to linguists, psychologists, philosophers, and historians of science for its evaluations of major theoretical concepts in light of enduring issues and problems in language studies.

Should teenagers have jobs while they're in high school? Doesn't working distract them from schoolwork, cause long-term problem behaviors, and precipitate a precocious transition to adulthood? This report from a remarkable longitudinal study of 1,000 students, followed from the beginning of high school through their mid-twenties, answers, resoundingly, no. Examining a broad range of teenagers, Jeylan Mortimer concludes that high school students who work even as much as half-time are in fact better off in many ways than students who don't have jobs at all. Having part-time jobs can increase confidence and time management skills, promote vocational exploration, and enhance subsequent academic success. The wider social circle of adults they meet through their jobs can also buffer strains at home, and some of what young people learn on the job--not least responsibility and confidence--gives them an advantage in later work life.

Drawing on the latest scientific research, Jason Zweig shows what happens in your brain when you think about money and tells investors how to take practical, simple steps to avoid common mistakes and become more successful. What happens inside our brains when we think about money? Quite a lot, actually, and some of it isn't good for our financial health. In *Your Money and Your Brain*, Jason Zweig explains why smart people make stupid financial decisions—and what they can do to avoid these mistakes. Zweig, a veteran financial journalist, draws on the latest research in neuroeconomics, a fascinating new discipline that combines psychology, neuroscience, and economics to better understand financial decision making. He shows why we often misunderstand risk and why we tend to be overconfident about our investment decisions. *Your Money and Your Brain* offers some radical new insights into investing and shows investors how to take control of the

battlefield between reason and emotion. *Your Money and Your Brain* is as entertaining as it is enlightening. In the course of his research, Zweig visited leading neuroscience laboratories and subjected himself to numerous experiments. He blends anecdotes from these experiences with stories about investing mistakes, including confessions of stupidity from some highly successful people. Then he draws lessons and offers original practical steps that investors can take to make wiser decisions. Anyone who has ever looked back on a financial decision and said, "How could I

have been so stupid?" will benefit from reading this book.
