Princeton  
University  
Press

Published in  
dual print and  
electronic  
formats, this  
is a new  
edition of a  
much  
acclaimed  
reference  
source that

brings  
together a  
wide range of  
sources of  
information in  
the African  
studies field,  
covering both  
print and  
electronic

sources. It evaluates the best online resources, the major general reference tools in print format, current bibliographies and indexing services, biographical, cartographic, statistical and economic resources, as well as film and video resources.

### **Vocational Rehabilitatio**

**n Psychology**  
Press  
The series Religion and Society (RS) contributes to the exploration of religions as social

systems– both in Western and non-Western societies; in particular, it examines religions in their differentiation from, and intersection with, other cultural systems, such as art, economy, law and politics. Due attention is given to paradigmatic case or comparative studies that exhibit a clear theoretical orientation with the empirical and historical data of religion and such aspects

of religion as ritual, the religious imagination, constructions of tradition, iconography, or media. In addition, the formation of religious communities, their construction of identity, and their relation to society and the wider public are key issues of this series.

*The Qualimetrics Approach*  
University of Chicago Press  
Statistical implicative analysis is a data analysis method

created by Régis Gras almost thirty years ago which has a significant impact on a variety of areas ranging from pedagogical and psychological research to data mining. Statistical implicative analysis (SIA) provides a framework for evaluating the strength of implications; such implications are formed through common knowledge acquisition techniques in any learning

process, human or artificial. This new concept has developed into a unifying methodology, and has generated a powerful convergence of thought between mathematicians, statisticians, psychologists, specialists in pedagogy and last, but not least, computer scientists specialized in data mining. This volume collects significant research contributions of several rather distinct

disciplines that benefit from SIA. Contributions range from psychological and pedagogical research, bioinformatics, knowledge management, and data mining. *Party Governance and Party Democracy* Springer Science & Business Media "The Modern World System", Immanuel Wallerstein's influential multivolume reinterpretation of global history, traces

the emergence and development of the modern world from the sixteenth century to the twentieth. -- From publisher's description.

**Bulletin of the Pan American Union** Edward

Elgar Publishing  
This volume brings together revised versions of a selection of papers presented at the Second International Conference on Recent Advances in Natural

Language Processing (RANLP'97) held in Tzigov Chark, Bulgaria, September 1997. The aim of the conference was to give researchers the opportunity to present new results in Natural Language Processing (NLP) based both on traditional and modern theories and approaches. The conference received substantial interest 167 submissions from more

than 20 countries. The best papers from the proceedings were selected for this volume, in the hope that they reflect the most significant and promising trends (and successful results) in NLP. The contributions have been grouped according to the following topics: tagging, lexical issues and parsing, word sense disambiguation and anaphora resolution, semantics,

generation, machine translation, and categorisation and applications. The volume contains an extensive index.

**The African Studies Companion**

John Benjamins Publishing  
This book takes an original approach to business models and entrepreneurs hip, resulting from a durable involvement with entrepreneurs and from experiments combining

theory and practice. The authors present the generation, remuneration, and sharing business model, which relates to the value generation, its remuneration and the sharing of this remuneration. They also outline the role and the central place of the business model within the entrepreneurial process; the theoretical bases conventions theory, resource based view

and stakeholder theory and the construction of the GRS model; the experiments conducted within teaching, practical, and theoretical frameworks; and the contribution of the business model to a theory of entrepreneurs hip theory. The book explains why the business model can be useful for entrepreneurs and why it is relevant to set it in place during the entrepreneurial process.

Students and researchers who are interested in entrepreneurship will find this an important resource for developing a new business. Management coaches, often interested in the most recent developments of management research, will have no difficulty moving between the theory and practice set out in this book. Finally, curious entrepreneurs will read this study not to

seek immediate solutions to a problem but to reflect on the topics addressed here that show that the business model is not just a fashion but is highly useful.

 Publisher description  
[Subject Index of the Modern Books](#)  
[Acquired by the British Museum in the Years 1916-1920](#)  
 Ediciones Mundi-Prensa  
 The underlying

theme of this edited collection is gendered citizenship, as well as the challenges and limits that confront the gendering of citizenship. It critiques the notion of the genderless nation-state citizen — in both analytical and policy terms and contexts — and necessarily engages with at least three major sets of contradictions or tensions: limitations on achieving gender equal or gender equitable

citizenship; relations and differences between gender equality policy, diversity policy, and gender mainstreaming; and interplays of academic analyses of and practical interventions on gendered citizenship. Contributors from diverse scientific disciplines and academic backgrounds aim to provide a better understanding of the challenges that societies within Europe

and elsewhere face vis-à-vis diversity, regionalism, transnationalism, and migration. *Recent Advances in Natural Language Processing II* IGI Global Given the centrality of political parties in modern democracies, most research on these systems either directly address their internal functioning and activities or question their critical role. Political science has moved from

describing institutions to the thorough analysis of behavior within these institutions and the interactions between them. The inevitable consequences of the maturing and institutionalization of the discipline of political science in many countries include the forming of sub-fields and specialized research communities. At the same time the number of democracies

has vastly increased since the 1980s and although not each attempt at democratization was eventually successful, more heterogeneous systems with some form of party competition exist than ever before. As a consequence, the literature addressing the large issues of party democracy spreads over many research fields and has become difficult to

master for individual students of party democracy and party governance. The present volume sets out to review the behavior and larger role of political parties in modern democracies. In so doing the book takes its departure from the idea that the main contribution of political parties to the working of democracy is their role as vehicles of political competition in systems of government.

Consequently the focus is not merely in the internal functioning of political parties, but rather their behavior the electoral, legislative, and governmental arenas. Thus several chapters address how political parties perform within the existing institutional frameworks. One more chapter looks at the role of political parties in building and adapting these institutions.

Finally, two chapters explicitly address the party contributions to democracy in established and new democracies, respectively. *Catalog of Copyright Entries. Third Series* Univ of California Press  
 There were no medical oncologists until a few decades ago. In the early 1960s, not only were there no such specialists, many practitioners regarded the treatment of terminally-ill

cancer patients with heroic courses of chemotherapy as highly questionable. Physicians loath to assign patients randomly to competing treatments also expressed their outright opposition to the randomized clinical trials that were then relatively rare. And yet today these trials form the basis of medical oncology. How did such a spectacular change occur? How did medical

oncology move from a non-entity and in some regards a reviled practice to the central position it now occupies in modern medicine? Cancer on Trial answers these questions by exploring how practitioners established a new style of practice, at the center of which lies the cancer clinical trial.

Walter de Gruyter GmbH & Co KG Bifurcation theory has made a very fast upswing in the last fifteen years. Roughly speaking it generalises to dynamic systems the possibility of multiple solutions, a possibility already recognised in static systems - physical, chemical, social - when operating far from their equilibrium states. It so happened that

quite a few staff members of the Erasmus University Rotterdam were thinking along those lines about certain aspects of their disciplines. To have a number of specialists and potential "fans" convene to discuss various aspects of bifurcation al thinking, seemed a natural development. The resulting papers were judged to be of interest to a larger public,

and as such are logically regrouped in this volume, one in a series of studies resulting from the activities of the Steering Committee on Interdisciplinary Studies of the Erasmus University, Rotterdam. Although the volume is perhaps multidisciplinary rather than interdisciplinary - the interdisciplinary aspect being only "latent" -, as a "soft" interdisciplinary exercise (the application of formal

structures of one discipline to another) it has a right to interdisciplinary existence! This book could not have been published without a generous grant of the University Foundation of the Erasmus University Rotterdam, which allowed the conference to be held and the resulting papers to be published; that generosity is gratefully acknowledged .  
*Cognitive Economics*

John Benjamins Publishing First published in 1973. This is volume 3 1969, of the Annual Survey of African Law. It includes papers, articles and discussions that are split into sections on Commonwealth African countries and Francophonic African Countries, and other African countries, as well as a listing of cases and statutes.

 Philosophical paradigms, theoretical frameworks, and methodologies make up the answering and problem solving systems that define current research approaches. While there are multiple research method books, the subject lacks an update and integrated source of reference for graduate

<p>courses.          Research          Methodologies          , Innovations          and          Philosophies          in Software          Systems          Engineering          and          Information          Systems aims          to advance          scientific          knowledge on          research          approaches          used in          systems          engineering,          software          engineering,          and          information          systems and          to update and          integrate          disperse and          valuable          knowledge on          research          approaches.</p>	<p>This aims to          be a collection          of knowledge          for PhD          students,          research-          oriented          faculty, and          instructors of          graduate          courses.  <u>A</u>  <u>Multidimensio</u>  <u>nal Economic</u>  <u>Assessment of</u>  <u>Africa</u> Walter          de Gruyter          The social          sciences study          knowing          subjects and          their          interactions. A          "cog nitive          turn", based          on cognitive          science, has          the potential          to enrich          these sciences          considerably.          Cognitive</p>	<p>economics          belongs within          this          movement of          the social          sciences. It          aims to take          into account          the cognitive          processes of          individuals in          economic          theory, both          on the level of          the agent and          on the level of          their dynamic          interactions          and the          resulting          collective          phenomena.          This is an          ambitious          research          programme          that aims to          link two levels          of com          plexity: the          level of          cognitive</p>
---	--	--

phenomena as studied and tested by cognitive science, and the level of collective phenomena produced by the economic interactions between agents. Such an objective requires cooperation, not only between economists and cognitive scientists but also with mathematicians, physicists and computer scientists, in order to renew, study and simulate models of dynamical systems

involving economic agents and their cognitive mechanisms. The hard core of classical economics is the General Equilibrium Theory, based on the optimising rationality of the agent and on static concepts of equilibrium, following a point of view systemised in the framework of Game Theory. The agent is considered "rational" if everything takes place as if he was maximising a function

representing his preferences, his utility function. Inequality, Cooperation, and Environmental Sustainability IAP The World Guide to Special Libraries lists about 35,000 libraries world wide categorized by more than 800 key words - including libraries of departments, institutes, hospitals, schools, companies, administrative bodies, foundations, associations

and religious communities. It provides complete details of the libraries and their holdings, and alphabetical indexes of subjects and institutions.

 Vector optimization is continuously needed in several science fields, particularly in economy, business, engineering, physics and mathematics. The evolution

of these fields depends, in part, on the improvements in vector optimization in mathematical programming. The aim of this Ebook is to present the latest developments in vector optimization. The contributions have been written by some of the most eminent researchers in this field of mathematical programming. The Ebook is considered essential for researchers and students in this field.

 Emerald Group Publishing  
 It gives us great pleasure to write the preface to this book, the second in the series of monographs produced by the European Academy of Rehabilitation Medicine. No part of medicine, no clinical intervention, is complete without thinking about its effect on the person's

life and the quality thereof. One of the most powerful determinants of this is work; a source not only of income, but of satisfaction and a sense of purpose and worth. The Academy, founded in 1969, is composed of senior European doctors specialising in Rehabilitation and Physical Medicine. It meets regularly to discuss matters of importance in the field, including

teaching, research and ethical matters. It recognises that the ability of the speciality and of related ones to decrease dependency and increase autonomy and quality of life needs to be better known. Hence the production of these monographs. They will help readers access a vast amount of literature on the practice of rehabilitation and its effectiveness. They should be particularly

useful to young doctors preparing for the European Boards certification in Physical and Rehabilitation Medicine as they are authoritative and cover subjects in depth. Topics covered in the series range from basic sciences to the most applied areas. The Modern World-System | Springer Science & Business Media With fresh thinking Covid, Brexit and The Anglosphere equips

academics, students policymakers and general readers with the tools to drive growth in a post-Pandemic post- Brexit fragmenting world order facing rapidly advancing technical change.
