Designing and implementing daily lesson plans can be among the most frustrating and time-consuming aspects of teaching—a tedious exercise that places artificial restrictions on student creativity and engagement with learning. In this game-changing book, author and instructional coach Michael Fisher shows teachers how they can free themselves from rigid and ineffective busywork by replacing lesson plans with learning journeys that are guided by the students' abilities, interests, and skill levels rather than by pre-selected checklists of day-to-day benchmarks. Loaded with tips, strategies, and detailed real-life examples, *Ditch the Daily Lesson Plan* is the perfect guide to crafting student-centered learning experiences at all levels and across the content areas.

This book is intended as a theoretical and practical resource for both new and experienced teachers of a second language. It integrates some of the ideas from cognitive linguistics into existing classroom approaches for teaching English as a second language through a series of lesson plans developed by teachers of English from Mainland China and Hong Kong. The lesson plans provide step-by-step instructions for teachers, including resources and an explanation of the theories underpinning each step. These plans, many of which are integrated into specific English as a foreign language textbook units, encourage teachers to be creative by adding or adapting the material they have in order to engage their students. Although the main audience is English teachers, the theoretical principles covered are applicable to teachers of any foreign language and the practical examples, provided in the lesson plans, can be easily modified to teach other languages as well. Similarly, it is not just for teachers working in Chinese contexts but for anyone interested in embodied cognition as a teaching approach. I intend these pages to serve as a companion for teachers to reflect on their existing practices, to provide new ideas and to make them aware of the many factors affecting learning.

Deeper learning, dialogic learning, and critical thinking are essential capabilities in the 21st-century environments we now operate. Apart from being important in themselves, they are also crucial in enabling the acquisition of many other 21st-century skills/capabilities such as problem solving, collaborative learning, innovation, information and media literacy, and so on. However, the majority of teachers in schools and instructors in higher education are inadequately prepared for the task of promoting deeper learning, dialogic learning, and critical thinking in their students. This is despite the fact that there are educational researchers who are developing and evaluating strategies for such promotion. The problem is bridging the gap between the educational researchers' work and what gets conveyed to

teachers and instructors as evidence-based, usable strategies. This book addresses that gap: in it, leading scholars from around the world describe strategies they have developed for successfully cultivating students' capabilities for deeper learning and transfer of what they learn, dialogic learning and effective communication, and critical thought. They explore connections in the promotion of these capabilities, and they provide, in accessible form, research evidence demonstrating the efficacy of the strategies. They also discuss answers to the questions of how and why the strategies work. A seminal resource, this book creates tangible links between innovative educational research and classroom teaching practices to address the all-important question of how we can realize our ideals for education in the 21st century. It is a must read for pre-service and in-service teachers, teacher educators and professional developers, and educational researchers who truly care that we deliver education that will prepare and serve students for life.

Examples throughout are representative of different grade levels and subjects areas. It should be understood at the outset that the content offered for curriculum planning is not a rigid prescriptive formula but a careful and purposeful thought process that must be considered to obtain optimal results. In addition to developing knowledge about curriculum and instructional planning (what teachers should know), this book offers an innovative method for translating that knowledge into performance (what teachers are able to do). Knowledge is implemented by the use of coaching rubrics, sets of criteria for developing performance. Though readers will receive a thorough background in the planning process just from the content itself, its potential will be fully realized when readers also use the coaching rubrics.
