Native Literacy and Life Skills Curriculum Guidelines

University of Georgia Press
 What does research tell us about the effects of school leadership on student achievement? What specific leadership practices make a real difference in school effectiveness? How should school leaders use these practices in their day-to-day management of schools and during the stressful times that accompany major change initiatives? Robert J. Marzano, Timothy Waters, and Brian A. McNulty provide answers to these and other questions in *School Leadership That Works*. Based on their analysis of 69 studies conducted since 1970 that met their selection

criteria and a recent survey of more than 650 building principals, the authors have developed a list of 21 leadership responsibilities that have a significant effect on student achievement. Readers will learn the specific behaviors associated with the 21 leadership responsibilities; the difference between first-order change and second-order change and the leadership responsibilities that are most important for each; how to work smart by choosing the right work to focus on to improve student achievement; the advantages and disadvantages of comprehensive school reform models for improving student achievement; how to develop a site-specific approach to improving student achievement, using a framework of 11

factors and 39 action steps; and a five-step plan for effective school leadership. Combining rigorous research with practical advice, *School Leadership That Works* gives school administrators the guidance they need to provide strong leadership for better schools.

Since its emergence in the seventeenth century as a distinctive cultural system, children's literature has had a culturally inferior status resulting from its existence in a netherworld between the literary system and the educational system. In addition to its official readership—children—it has to be approved of by adults. Writers for children, explains Zohar Shavit, are constrained to respond to these multiple systems of often mutually contradictory demands. Most writers do not try to bypass these constraints, but accept them as a framework for their work. In the most extreme cases an author may ignore one segment of the readership. If the adult reader is ignored, the writer risks rejection, as is the case of popular literature. If the writer utilizes the child as a pseudo addressee in order to appeal to an adult audience, the result can be what Shavit terms an ambivalent work. Shavit analyzes the conventions and the

moral aims that have structured children's literature, from the fairy tales collected and reworked by Charles Perrault and the Brothers Grimm—in particular, “Little Red Riding Hood”—through the complex manipulations of Lewis Carroll in *Alice's Adventures in Wonderland*, to the subversion of the genre's canonical requirements in the chapbooks of the eighteenth century, and in the formulaic Nancy Drew books of the twentieth century. Throughout her study Shavit, explores not only how society has shaped children's literature, but also how society has been reflected in the literary works it produces for its children. This book provides a collection of critical pieces that support the idea that good teaching and learning of geography in fieldwork and using technology should

consider the dimensions of curriculum design, instructional design and resource provision, as well as assessment for such learning activities. Further, it clearly describes the thinking, experiences and critical comments concerning two broad areas of learning outside the traditional classroom - in the field and with technology.

For four hundred years--from the first Spanish assaults against the Arawak people of Hispaniola in the 1490s to the U.S. Army's massacre of Sioux Indians at Wounded Knee in the 1890s--the indigenous inhabitants of North and South America endured an unending firestorm of violence. During that time the native population of the Western Hemisphere declined by as many as 100 million people. Indeed, as historian David E. Stannard argues in this stunning new book, the European and white American destruction of the native peoples of the Americas was the most massive act of genocide in the history of the world. Stannard begins with a portrait of the enormous richness and diversity of

life in the Americas prior to Columbus's fateful voyage in 1492. He then follows the path of genocide from the Indies to Mexico and Central and South America, then north to Florida, Virginia, and New England, and finally out across the Great Plains and Southwest to California and the North Pacific Coast. Stannard reveals that wherever Europeans or white Americans went, the native people were caught between imported plagues and barbarous atrocities, typically resulting in the annihilation of 95 percent of their populations. What kind of people, he asks, do such horrendous things to others? His highly provocative answer: Christians. Digging deeply into ancient European and Christian attitudes toward sex, race, and war, he finds the cultural ground well prepared by the end of the Middle Ages for the centuries-long genocide campaign that Europeans and their descendants launched--and in places continue to wage--against the New World's original inhabitants. Advancing a thesis that is sure to create much controversy, Stannard contends that the perpetrators of the American Holocaust drew

on the same ideological wellspring as did the later architects of the Nazi Holocaust. It is an ideology that remains dangerously alive today, he adds, and one that in recent years has surfaced in American justifications for large-scale military intervention in Southeast Asia and the Middle East. At once sweeping in scope and meticulously detailed, American Holocaust is a work of impassioned scholarship that is certain to ignite intense historical and moral debate.

Give 'em Something to Talk about

ProQuest What is the difference between a wink and a blink? The answer is important not only to philosophers of mind, for significant moral and legal consequences rest on the distinction between voluntary and involuntary behavior. However, "action theory"—the branch of philosophy that has traditionally articulated the boundaries between action and non-action, and between voluntary and involuntary behavior—has been unable to account for the difference. Alicia Juarrero argues that a mistaken, 350-year-old model of cause and explanation—one that takes all causes to be of

the push-pull, efficient cause sort, and all explanation to be prooflike—underlies contemporary theories of action. Juarrero then proposes a new framework for conceptualizing causes based on complex adaptive systems. Thinking of causes as dynamical constraints makes bottom-up and top-down causal relations, including those involving intentional causes, suddenly tractable. A different logic for explaining actions—as historical narrative, not inference—follows if one adopts this novel approach to long-standing questions of action and responsibility.
