Chris Taylor has had a very successful career as a Royal Navy officer, helicopter pilot, test pilot, instructor and as an internationally acclaimed civil certification test pilot. His first book, *Test Pilot*, concentrates on anecdotes and incidents from the most recent phase of his career. This book is the prequel and is his account of his ten years' service as an experimental test pilot, from 1994 until 2004, at MoD Boscombe Down, the UK's tri-Service home of military aircraft testing and evaluation. In this book, Chris explains what led to his passion to be a test pilot and how, with tenacity, he plays the cards he was dealt as well as he could. The story captures the difficulties and challenges associated with being selected for the single annual place at the Empire Test Pilots' School (ETPS) and the dedication required to then complete the very demanding twelve-month course. Chris was one of only three helicopter experimental test pilots posted to the Experimental Flying Squadron (EFS). It was there that he worked with scientists from the defense Research Agency (DRA) at Bedford and Farnborough on a number of cutting-edge technologies, specializing in ship/helicopter interface testing. In addition to flying the Westland Wessex, Lynx and Sea King, Chris was able to act as an evaluation pilot in the Hunter, Jaguar, Andover, Hawker Siddeley HS748, and the Comet. During his time as an active test pilot, EFS was merged into three platform squadrons which gave Chris the chance to play a full part in conventional 'release to service' activities in a wide variety of rotorcraft. Asked to take on the role of a flight test instructor (FTI), Chris served at ETPS where he made sweeping changes to the syllabus, acquired a new helicopter type and had to deal with a number of students who could not cope with the rigors of the course. In his first year he suffered a 'flame out' in a Hawk jet, an engine failure during his first flight in the twin-engine Basset and crashed the school's Westland Scout helicopter- all of which are fully discussed. Following four successful years teaching helicopter flight test, Chris was recruited to manage the ETPS short course portfolio. This required the design, sale and delivery of numerous flight test courses, while also introducing innovative teaching methods and the use of civil registered aircraft. In this new, exciting and rewarding role Chris taught both fixed wing and rotary wing students and the book explains the difficulties of learning the additional skills and flight test techniques required of a fixed wing test pilot. This autobiography explores the military flight test career of an individual who is arguably one

of the best qualified and most experienced test pilots working today anywhere in the world.

Aeromedical psychology is that branch of psychology pertaining to the assessment, selection and evaluation of aviation personnel. This book, *Aeromedical Psychology*, is designed to provide the means for a variety of clinicians to carry out sound assessment and selection procedures, perform informed evaluations and make subsequent recommendations regarding flight status and treatment strategies geared to the aviation environment. To facilitate a dynamic understanding of the field, the book emphasizes an integration of applications and theory, case examples and research. The book is divided into three parts. The first presents assessment and selection procedures for aviation personnel (i.e. air traffic controllers, flight officers and pilots) and astronauts and the many ways in which both psychologists and psychiatrists are involved in these roles. In the second part, the waiver standards put forth by both the FAA and the various branches of the military are presented, as well as the waiver decision process. Clinical issues unique to aviation - notably fear of flying, motivation to fly and airsickness - are addressed, as well as possible courses of intervention, treatment and disposition. In the final part, more specialized issues pertaining to aeromedical psychology are dealt with, namely the psychopharmacological research and regulations applicable to recreational pilots and aviation personnel, managing the aftermath of aviation mishaps and the psychologist's role in accident investigations.

Only the best prepared are chosen to start the highly competitive multimillion-dollar training programs that transform aspiring candidates into U.S. military aviators. This fully updated edition of *Barron's Military Flight Aptitude Tests* provides would-be aviators in all five U.S. armed services with the competitive edge they will need to score their best and maximize their chances of being selected! This book is an effective, full-spectrum resource for officer candidates, ROTC cadets from all services, and current military members. Six full-length practice tests (two per service) with answers and explanations for every question get readers ready for the Air Force Officer Qualifying Test (AFOQT), the Selection Instrument for Flight Training (SIFT), and the Navy/Marine Corps/Coast Guard Aviation Selection Test Battery (ASTB-E). Test overviews and detailed review sections give potential pilots the boost they need to rise to the top of the selection list, and most of the review subjects apply to all three tests. Successful aviation applicants strongly recommend working through every valuable review section, and the other services' tests are great for extra practice to reinforce

your learning. Written by a veteran, joint qualified military officer and instructor, this book's review sections cover language skills, reading comprehension, math knowledge, arithmetic reasoning, mechanical comprehension, aviation and nautical technical information, science, and specific mental skills such as block counting, finding hidden figures, and spatial apperception. The author also coaches readers on effective study techniques, provides expanded information resources, and gives pilot candidates a thorough preview of how each test is structured and conducted.

For centuries the British developed a reputation as a nation of explorers. From Francis Drake's circumnavigation of the globe to the ascent of Everest, British explorers crossed oceans and continents and ventured where few, if any, had gone before. Until very recently, that legacy of exploration had not extended to space. For decades, successive governments chose to stay out of the human spaceflight programme, but in 2008 there were signs of optimism when ESA selected a new class of six astronauts, including, for the first time, a British representative: Timothy Peake. This book puts the reader in the flight suit of Britain's first male astronaut. In addition to delving into the life of Tim Peake, this book discusses the learning curves required in astronaut and mission training and the complexity of the technologies required to launch an astronaut and keep them alive for months on end. This book underscores the fact that technology and training, unlike space, do not exist in a vacuum; complex technical systems, like the ISS, interact with the variables of human personality, and the cultural background of the astronauts. But ultimately, this is the story of Tim Peake and the Principia mission and the down-to-the-last-bolt descriptions of life aboard the ISS, by way of the hurdles placed by the British government and the rigors of training at Russia's Star City military base.

The author, Roger Annett, experienced first-hand the events detailed here. Flying with 215 Squadron, and co-piloting Argosy transport aircraft deep over Malayan jungle terrain from 1963 to 65, he is well placed to provide a colorful account of this dramatic period. Following a reunion of RAF Whirlwind veterans of Borneo, Annett began work on this record of their collective experience, attempting to stir the memories of both war veterans and civilians alike, riveted by the drama as it played out by opposing forces attempting to control the island of Borneo. The book describes the

oppositions, antagonisms, victories, and defeats experienced on the island. Borneo itself, with its difficult terrain, jungles, and lack of adequate road networks, proved to be one of the biggest challenges from a military perspective, and it is brought to life here. The story of the 'Borneo Boys' of the title traces a journey from new recruits at boot camp to flying training, and on to Borneo itself. It was here where a fraternal bond was to be forged to last a lifetime and provide an impetus for this book. The process of Theatre familiarization jungle training, nursing Whirlwind 10s over and around the mountainous Malayan jungle is recorded here with first-hand authenticity. Setting this journey in context, Annett fills out the history of the wider conflict in which the boys were embroiled. The Far East colonial tensions, which bred antagonism and ultimately led to the conflict, are detailed, as are the cross-border raids and riots, which bred a fever of revolt. Much is written already on the Borneo conflict, a lot of it dealing with the politics of the situation. This book swoops its focus on the young men who were called upon to fly over such confusion, far away from home. It is their daily adventures, camaraderie, and learning trajectory, which we are faced with. All the excitement of the Aviator's adrenalin ride is translated into eloquent prose, strengthened by the kind of confident delivery that only a man involved in such proceedings could achieve.

The Royal Artillery played an absolutely vital, though often forgotten, part in the British armed forces successful operation to recapture the Falkland Islands in 1982. The actions of the artillery were recorded by one young officer in a journal which he kept before, during and after the conflict. Second Lieutenant Tom Martin was a Command Post Officer with 29 (Corunna) Field Battery RA which deployed to the South Atlantic in 1982 as part of the Task Force dispatched to retake the Falklands. With its six 105mm Light Guns making the journey on the MV Europic Ferry, the Battery sailed south on the MV Norland with 2 PARA, joining 3 Commando Brigade for the landings. The five gun batteries of the Royal Artillery, totaling thirty light field guns, fired a tremendous number of shells on the Argentine forces. For its part, 29 (Corunna) Field Battery fired the first Fire Mission of the conflict and continued to do so until the Argentinian surrender in the most testing environment and against the odds. Whilst in the South Atlantic, Martin sought to detail and record the action on the Battery's gun position. Supported by the recollections of some of those he served alongside, Martins notes and diary entries form the basis of this book; a vivid, blow-by-blow account which provides a comprehensive picture of the Royal Artillery and its pivotal role in the Falklands War.

The presentation of mental illness at work has different implications and consequences depending on the specific nature of the job, work context, regulatory framework and risks for the employee, organisation and society. Naturally there are certain occupational groups where human factors and/or mental illness could impair safety and mental acuity, and with potentially devastating consequences. For pilots, the medical criteria for crew licensing are stipulated by regulatory aviation authorities worldwide, and these include specific mental illness exclusions. The challenge of assessment for mental health problems is, however, complex and the responsibility for psychological screening and testing falls to a range of different specialists and groups including AMEs (authorised aviation medical examiners), GPs and physicians, airline human resources departments, psychologists, human factor specialists and pilots themselves. Extending and developing the ideas of *Aviation Mental Health* (2006), which described a range of psychological issues and problems that may affect pilots and the consequences of these, this book presents an authoritative, comprehensive and practical guide to modern, evidence-based practice in the field of mental health assessment, treatment and care. It features contributions from experts in the field drawn from

several countries, professions and representing a range of aviation-related organisations, displaying a range of different skills and methods that can be used for the clinical assessment of pilots and in relation to specific mental-health problems and syndromes.

SSB INTERVIEW Text & Guide Crowood

Justyn Rees Larcombe had everything. Successful in the world of re-insurance, he was being fast tracked for further promotion in a global company. He had amassed a large amount of wealth and all the trappings that went with it, including a big house and fast cars. He had a beautiful wife and three sons. And then he lost it all. Addicted to gambling, Justyn lost three quarters of a million pounds in three years. He spent his wife's money and even used his corporate credit card to fund his habit. It cost him his job, and then his wife, children, home and reputation. Having barely escaped criminal prosecution, he reached rock bottom and considered suicide. In one final throw of the dice, Justyn

returned to the God of his youth. It turned out to be the safest bet he had ever made - through a miraculous and dramatic healing he stopped gambling overnight. This is a highly readable and engaging story from a man who had and lost everything only to discover all he ever wanted in the embrace of a loving God. Today Justyn speaks widely about the dangers of gambling. "God has restored much of what I lost and is continuing to do so," he explains. "I am slowly dealing with the consequences of my habit."
