The major new course text has been written by experienced authors to provide coverage of the Advanced

Subsidiary (AS) and Advanced GCE Biology and Human Biology specifications in a single book. Advanced Biology provides clear, well-illustrated information, which will help develop a full understanding of biological structure and function and of relevant applications. The topics have been carefully organised into parts, which give a logical sequence to the book. This new text has been developed to replace the best-selling titles *Biology: Principles and Processes* and *Biology, A Functional Approach*. Features include: full-colour design with clear diagrams and photographs; up-to-date information on biotechnology, health, applied genetics and ecology; clearly written text using the latest Institute of Biology terminology; a useful summary and a bank of practice questions at the end of every chapter; support boxes help bridge the gap from GCSE or equivalent courses; extension boxes providing additional depth of content - some by guest authors who are experts in their field; and a comprehensive index so you can quickly locate information with ease. There is also a website providing additional support that you can access directly at www.advancedbiology.co.uk.

Neurology for Nurses is an attempt to make neurology as clear as possible, using the nursing model. The first portion of this book provides a diagram of the planes of the body that considers the nervous system anatomically, which is referenced throughout the book. The different orientations and planes of the body include the anterior (ventral) surface, posterior (dorsal) surface, lateral, medial, sagittal (median) section, Coronal (frontal) section, and transverse. Other than detailed descriptions of the anatomy and functions of nerves and the nervous system, this book provides diagnostic evaluation of diseases and clinical conditions, such as multiple sclerosis, cerebrovascular accidents, brain tumors, head injury, epilepsy, Parkinson's disease, and meningitis. This

book includes as well discussions on neurological examinations, investigations, and observations. The topic on nursing care for unconscious patients is also provided. This text is aimed primarily at nursing students in training, but will also benefits those taking a post-basic nursing course in neurology.

Physiology and Biochemistry in Modern Medicine Letts and Lonsdale

The laws of animal behavior have been revised and revealed through research performed by zoologists, physiologists and experimental psychologists. Each has contributed much. Their main meeting ground has been the study of mammals, especially rats. This classic book is unique in bringing together the principal conclusions of these researchers in a compact, well illustrated, and lucid form. The author himself made important original contributions to wild rat behavior; his account of "white rat psychology" and of relevant work on other species is equally authoritative. Experience as a teacher enabled him to write an unusually logical and comprehensive text, suitable for students of zoology, psychology and medicine. This book belongs to no particular school of biology or psychology. Rather it admits the work of all schools and strict adherence to none. The principal topics covered include: movement in the living space; feeding behavior; social and reproductive behavior; the analysis of "instinct"; the analysis of learned behavior; "motivation" and "drive"; the brain and behavior. The book includes a full, carefully selected bibliography, current up to the time of original publication of the original edition.
