Compendio historial de la ... Provincia de Guipuzcoa. [With an introduction by R. de Guereca.] (Apendice de las memorias que tiene la Provincia de Guipuzcoa en obras ineditas de L. Garcia de Salazar y otros autores, por Don R. de Floranes).
Penguin

Over the last few decades, historians of scientific ecology have brought to light the role of the European scientists who have laid the basic cornerstones of modern ecology between the end of the eighteenth century and the beginning of the twentieth century. The foundations of geobotany were laid by Alexander von Humboldt (1769-1859), Augustin-Pyramus de Candolle (1778-1841), Alphonse Jules Dureau de la Malle

(1777-1857), Gaston Bonnier (1853-1922) and Charles Flahault (1852-1935); biocenotics, by Erasmus Darwin (1731-1802), Charles Lyell (1797-1875), Pierre-François Verhulst (1804-1849), Charles Darwin (1809-1882), Karl Moebius (1825-1908), Charles Valentine-Riley (1843-1895), and François-Alphonse Forel (1841-1912); agrochemistry and microbiology by Justus von Liebig (1803-1873), Jean-Baptiste Boussingault (1802-1887), and Stanislas Winogradski (1856-1953); the taxonomy of communities by August Heinrich Grisebach (1813-1879), Anton Kerner von Marilaün (1831-1898), Alphonse de Candolle (1806-1893), and Charles Flahault; and anthropogeography by Karl Ritter (1779-1859), Elisée Reclus (1830-1905),

and Friederich Ratzel (1844-1904). Together, they created the conditions that, with Eugenius Warming (1841-1924), gave birth to the autonomous discipline of scientific ecology, thirty years after the German biologist Ernst Haeckel (1834-1919) had christened this new branch of biology. Up to now, the writings of these scientists have been scattered in various publications that were often not accessible, which made a comparative study almost impossible. There was thus a need to bring together the primary sources in their original form, pagination, and language (whenever possible, a version of the text has been made available in a second language as well). They are gathered here in two volumes, in an analytical framework that aids in

understanding their relevant historical context and significance. To deal with the complex multidisciplinary roots of the history of ecology, Pascal Acot has brought together a group of historians with authoritative knowledge of the field's various sub-branches, without ever losing sight of ecology's relationship to the broader history of biology and the environmental sciences.
