Worldwide, Population Ecology is the leading textbook on this titled subject. Written primarily for students, it describes the present state of population ecology in terms that can be readily understood by undergraduates with little or no background in the subject.

Carefully chosen experimental examples illustrate each topic, and studies of plants and animals are combined to show how fundamental principles can be

derived that apply to both species. Use of complex mathematics is avoided throughout the book, and what math is necessary is dealt with by examination of real experimental data rather than dull theory. The latest edition of this leading textbook. Adopted as an Open University set text.

Non-pharmacological interventions (NPIs) have become essential solutions for better living, preventing disease, and self-care, in addition to biomedical treatments, and for increasing longevity without loss of quality of life. Over the past 20 years, these practices have gone from general diet and hygiene advice to targeted and personalized solutions for prevention, care optimization, and curative treatments. Selected empirically for centuries or recently with the help of technological innovations and epigenetic, interventional, and medico-economic studies, their development is growing and diversifying around the world. Today an NPI ecosystem is made up of a myriad of public and private actors. As interest in NPIs grows, so do questions about safety, effectiveness, standardization, ethical practice, and surveillance. In this book, the author answers these questions with a scientific approach, because evidence-based science, evidence-based practice, clinical research, and data monitoring have revolutionized this field. Topics explored among the chapters include:

- Defining Non-Pharmacological Interventions
- The Benefits and Dangers of Non-Pharmacological Interventions
- Motives and Facilitators of Non-Pharmacological Intervention Use
- The Market for Non-Pharmacological Interventions
- Evaluation of Non-Pharmacological Interventions
- The

his book combines the perspectives of a dedicated yogi with that of a former anatomy professor and research associate at two major American medicine schools. He has set himself the ambitious goal of combining the modern scientific understanding of anatomy and physiology with the ancient practice of hatha yoga. The result of an obvious labour of love, the book explains hatha yoga in demystified, scientific terms while at the same time honouring its traditions. It should go a long way in helping yoga achieve the scientific recognition it deserves. Useful as both a textbook and a reference work, this is a book that all serious yoga teachers and practitioners will want on their shelves.

This unique educational tool introduces learners to the countries of the world and the states of the United States. Through active participation, coloring the maps, users gain a broad understanding of the material—and retain that understanding. Each section begins with a plate containing a political map, a physical map, and regional maps. World Thematic Maps consist of eleven global maps covering climate, rainfall, temperatures, prevailing winds, ocean currents, vegetation, land use, population, racial distribution,

languages, and religions—presenting a «global» view of human activity. Flags and Review of Nations groups flags of the world according to continents, with the illustration of the flag placed close to the country of origin. For children of all

ages—and their parents—who could benefit from a colorful “crash course” —or “refresher” —in geography, and an enjoyable and informative guide to a greater understanding of the world around them.
